The Archaeology Of Human Bones:

The Archaeology of Human Bones Simon Mays, 2021-03-01 The Archaeology of Human Bones provides an up to date account of the analysis of human skeletal remains from archaeological sites introducing students to the anatomy of bones and teeth and the nature of the burial record Drawing from studies around the world this book illustrates how the scientific study of human remains can shed light upon important archaeological and historical questions This new edition reflects the latest developments in scientific techniques and their application to burial archaeology Current scientific methods are explained alongside a critical consideration of their strengths and weaknesses The book has also been thoroughly revised to reflect changes in the ways in which scientific studies of human remains have influenced our understanding of the past and has been updated to reflect developments in ethical debates that surround the treatment of human remains There is now a separate chapter devoted to archaeological fieldwork on burial grounds and the chapters on DNA and ethics have been completely rewritten This edition of The Archaeology of Human Bones provides not only a more up to date but also a more comprehensive overview of this crucial area of archaeology Written in a clear style with technical jargon kept to a minimum it continues to be a key work for archaeology students

Shadows in the Soil Tony Waldron, 2001 In explaining what the archaeologist can reliably deduce about past societies from the study of bones and other human remains Dr Tony Waldron carefully avoids over technical jargon He covers the subject under the three headings of Life Death and Disease He explains first that bones give us information about age sex height weight working life and the demography of a society We also learn of the causes of death whether natural or intentional and the evidence for a whole range of diseases from aching joints and teeth to infectious diseases such as tuberculosis and syphilis

Human Bones in Archaeology Ann Stirland, 1986 Archaeology is often thought of as being concerned with the material remains of previous groups of people traditionally only their monuments and their artefacts have been studied However another aspect of archaeology is the study of the physical environment in which people lived Environmental archaeology is concerned with this work and includes the study of soils food sources and animal bones It also includes the study of the people themselves from the skeletal remains This is known as physical anthropology and like any other aspect of environmental archaeology is very specialized This book describes in simple terms the various procedures used by the specialist The effects of different burial conditions and rituals on the bones are explained and ways of excavation and treatment are suggested The human skeleton is described as are methods of recording and analysis The effects of accident and disease on the skeleton are included and examples from various groups of skeletons are discussed The numerous illustrations show the reader what to look for and a comprehensive further reading list is included
