The Architect's Guide to Running a Practice David Littlefield,2012-05-31 This is your essential one stop shop for information on starting and running a practice Case studies and advice from practitioners big and small run alongside outlines of all the key topics to give you an insight into the problems and challenges others have faced when setting up a design business Accessible and informative this handbook is the ideal first point of reference when starting a practice Architects have many different reasons for setting up in practice equally there are many ways of running your own business This handbook helps you consider whether or not you should set up on your own examining issues such as financing office space recruitment IT and working out a business plan Some architects want to stay small while others have ambitions to grow into large businesses Some grow big accidentally And then there are those who pick and choose their work carefully and even turn down undesirable contracts while others will grab at everything possible This book would explore these different models and illustrate how different kinds of practice develop into successful businesses Importantly the book will stress that these issues are crucial you may be the best designer in the world but unless your business is well managed you will fail On the other hand some successful architects spend a lot of time looking for new work and attending to management issues rarely finding the time for design work This book would illustrate how architects have struck a balance between these two extremes

The Architect in Employment David Chappell, 1987 *Constructing Professional Discourse* Concepción

Orna-Montesinos, 2012-01-17 This book explores the fascinating role that language plays in the construction of non verbal objects by mapping out the ontological meaning of the specialised concepts and the domain specific knowledge embedded in them In doing so it provides a comprehensive linguistic insight into the discourse of professional domain specific communities and hence into the communication practices and procedures of those communities In this respect the book

offers a response to the claims made by many of the most influential applied linguists today such as Vijay Bhatia 1993 2004 John Swales 1990 2004 or Ken Hyland 2002 among others who have consistently defended the need for applied linguistic research into the textual generic and social perspectives on the under researched interrelatedness of the discoursal and professional practices of a discipline Specifically this book provides readers with an integrative multi perspective approach to the study of professional domain specific discourses While it mainly draws on the tenets of genre theory and discourse semantics it also nurtures from the theoretical and empirical foundations of applied linguistics cognitive linguistics corpus linguistics and ontological engineering The book starts from the analysis of domain specific texts as final written products with specific lexico grammatical semantic and rhetorical features to later enquire into the written products as textual artefacts closely linked to the social context of production and interpretation of the text This integrative approach provides fresh new insights into the way the processes of writing are affected by the community specific institutional and socio historical circumstances in which domain specific texts are produced
