Forged Paul White (Blacksmith), 2020. This book will teach you to hand-build a knife using the traditional method of blacksmiths of old: forging. Traditional forging of a knife blade is a process which uses the ancient techniques of moving hot steel with hammer and anvil alone into a knife form that is ready for filing, heat treating, and sharpening with no or very minimal electric grinding. Almost anyone with basic hand-tool aptitude can learn to make a knife by forging. Forging skills are not outside the average person's facility or capacity. If this is a new encounter for you, it will necessitate your swinging a hammer not at a nail but at a piece of hot steel, learning and applying some ten or twelve blacksmithing techniques and secrets, and experiencing some trial and error. I have probably taught hundreds of men, women, and a few children to do this, and I am confident you can learn to do this too. As a wise man said: Life is trial and error, mostly error. I make errors every time I go to my anvil. So will you. This book also teaches traditional fit and finish skills with hand tools alone. It explains an ancient riveted full-tang handle construction system that surpasses modern methods. This book is designed for both first-time back-yard beginner smiths to experienced knifemakers and any general blacksmiths in between wanting to build a knife using these ancient ways.
