Stowell,Daune West,James G. Howell,2012-12-06 As we approach the end of the

20th century we can look back upon the achievements that have been made in a variety of human endeavours with pride. Enormous strides have been made to improve the quality of life of millions of people through the application of the scientific discoveries made during this and past centuries. The 20th century will be remembered as much for the mass exploitation of scientific discovery as for the discoveries themselves. The technological age has meant that the human being is able to contemplate activities which defy nature. For example, some of the work involved in the preparation of these proceedings has been done whilst travelling at over 500 miles per hour, seven miles above the surface of the earth. It is not difficult to conjecture about the effect that this relatively recent technology has had upon a number of systems. Air transportation has provided a number of benefits including such disparate examples such as enabling holidays, famine relief and the cross fertilisation of cultural practices from other lands. Equally, there have been undesirable effects such as enabling the means of mass destruction, interference in other cultures and the speedy transportation of disease. Moreover, the physical presence of the aeroplane itself represents the consumption of fossil fuels, a source of pollution and a change in the way think about life. The view expressed here is of course the view of an inhabitant of the western world. *Dynamic Simulation and Virtual Reality in Hydrology and Water Resources Management* Ramesh S.V. Teegavarapu, Chandramouli V.

Chandramouli, 2021-07-27 *Dynamic Simulation and Virtual Reality in Hydrology and Water Resources Management* focuses on the understanding, use and application of system dynamics simulation and virtual reality approaches for modeling the spatial and temporal behavior of natural and managed hydro environmental systems. The book discusses concepts of systems thinking and system dynamics approach and it furthers understanding of the dynamic behavior of natural and engineering systems using feedbacks and dynamic simulation. Numerous examples of models built using different system dynamics simulation modeling environments are provided. It also introduces concepts related to computer animation and virtual reality based immersive modeling. Applications of systems dynamics simulation with animation and virtual reality approaches for modeling and management of hydro environmental systems are illustrated through case studies. This text is ideal for water resources professionals, graduate students, hydrologic modelers and engineers who are interested in systems thinking, dynamic simulation and virtual reality modeling approaches. It will serve as a valuable reference for engineering professionals who model, manage and operate hydrosystems. Engineering educators will find the book immensely useful to enhance the learning experiences of students. Dr Ramesh S V Teegavarapu is a professor at Florida Atlantic University with expertise in modeling water resources and environmental systems, hydroinformatics and climate change. Dr Chandramouli V Chandramouli is a professor at Purdue University Northwest.
