Abstract

The popularity of mobile phones has brought about a revolution in the way people do things. Most of this revolution has been in the way people communicate. Today, communication has become instant even for people in different parts of the world.

With people needing to keep in touch with their loved ones, business associates and acquaintances, mobile devices have become an irreplaceable part of life. However, this popularity has come with unintentional and even risky repercussions. According to researchers, communicating in mobile phones is linked to an upsurge in unfocused driving.

This act of distracted driving in return leads to injury and possible loss of lives through road accidents. If this is to be stopped, there is need to move with urgency and dissuade people from using their mobile phones while driving. This research paper looks at the dangers of texting while driving. The research paper will present some statistics to prove that texting while driving is one of the biggest contributors of road accidents in American roads.
