The Alc 1 The Genesis:

Experimental models of early exposure to alcohol: a way to unravel the neurobiology of mental retardation Alberto Granato, Andrea De Giorgio, 2015-01-27 Excessive alcohol drinking represents a major social and public health problem for several countries Alcohol abuse during pregnancy leads to a complex syndrome referred to as fetal alcohol spectrum disorders FASD chiefly characterized by mental retardation The effects of early exposure to ethanol can be reproduced in laboratory animals and this helped to answer several key questions concerning the human pathology The interest of experimental models of FASD is twofold First they increase our knowledge about the dose and modality of alcohol consumption able to induce damaging effects on the developing brain Second experimental models of FASD can provide useful hints to elucidate the basic mechanisms leading to the intellectual disability In fact experimental exposure to alcohol can be carried out during discrete often very restricted time windows As a consequence FASD models though depending on the multifaceted interference of alcohol with several molecular pathways can provide valuable information about which specific developmental periods and brain areas are critically involved in the genesis of mental retardation Putting together data obtained through several experimental paradigms of alcohol exposure and those deriving from other genetic and non genetic models one can figure out to what extent different types of mental retardation share common pathogenetic mechanisms The present Research Topic is aimed at establishing the state of the art of the current research on experimental FASD focusing on differences and homologies with other types of intellectual disability The ultimate goal is to find out a common roadmap in view of future therapeutical approaches

The Biology of Alcoholism Benjamin Kissin, Henri Begleiter, 2013-03-09 In this volume the third of our series the emphasis has shifted from the theoretical and experimental to the more clinical and practical aspects of alcoholism Where in the earlier volumes more attention was directed to animal than human studies in this volume almost all material deals with the human condition The clinical manifestations of alcoholism may be divided into two major aspects that of the disease itself and that of its complications This separation is to some extent artificial since in a sense the natural history of the disease is a function of the development of certain complicating mechanisms These mechanisms in turn either become part and parcel of the underlying condition alcoholism or give rise to a

new set of clinical variables characterized as medical complications At this point the dichotomy becomes real The disease alcoholism tends to be seen as a distinct psychosocial entity and to be treated with psychosocial techniques The medical complications are more clearly envisioned as being within the legitimate domain of medical practice and are treated by physicians who often tend to ignore the underlying alcoholism The patient is sometimes lost in between The major thrust of this volume is an attempt to describe the mechanisms of alcoholism as they are now known in such a way as to establish a continuum between the disease alcoholism and its medical complications **The Yale Law Journal** ,1923 **Sharing and Hiding Religious Knowledge in Early Judaism, Christianity, and Islam** Mladen Popović,Lautaro Roig Lanzillotta,Clare Wilde,2018-08-21 Few studies focus on the modes of knowledge transmission or concealment or the trends of continuity or change from the Ancient to the Late Antique worlds In Antiquity knowledge was cherished as a scarce good cultivated through the close teacher student relationship and often preserved in the closed circle of the initiated From Assyrian and Babylonian cuneiform texts to a Shi'ite Islamic tradition this volume explores how and why knowledge was shared or concealed by diverse communities in a range of Ancient and Late Antique cultural contexts From caves by the Dead Sea to Alexandria both normative and heterodox approaches to knowledge in Jewish Christian and Muslim communities are explored Biblical and quranic passages as well as gnostic rabbinic and esoteric Islamic approaches are discussed In this volume a range of scholars from Assyrian studies to Jewish Christian and Islamic studies examine diverse approaches to and modes of knowledge transmission and concealment shedding new light on both the interconnectedness as well as the unique aspects of the monotheistic faiths and their relationship to the ancient civilisations of the Fertile Crescent **Hermias: On Plato Phaedrus 227A-245E** Dirk Baltzly,Michael Share,2018-04-05 This commentary records through notes taken by Hermias Syrianus seminar on Plato's Phaedrus one of the world's most influential celebrations of erotic beauty and love It is the only Neoplatonic commentary on Plato's Phaedrus to have survived in its entirety Further interest comes from the recorded interventions by Syrianus pupils including those by Proclus his eventual successor as head of the Athenian school who went on to teach Hermias father Ammonius The first of two volumes of Hermias commentary the chapters translated here discuss the argument that the soul can be proved immortal as being the self moving source of eternal motion Aristotle explicitly disagreed with Plato on this treatment of the soul and Syrianus having previously in a commentary on the Metaphysics criticised Aristotle severely when he disagreed with Plato feels obliged here too to address the apparent disagreement This new translation is thus vital for understanding Syrianus attitude to Aristotle **The Northwestern Lutheran** ,1987 **The ^AOxford Handbook of Berkeley** ,2022-01-18 The Oxford Handbook of Berkeley is a compendious examination of a large number of topics in the philosophy of George Berkeley 1685-1753 Anglican Bishop of Cloyne the famous idealist and most illustrious Irish philosopher This volume includes contributions from thirty four expert commentators on Berkeley's philosophy some of whom provide a state of the art account of his philosophical achievements

and some of whom place his philosophy in historical context by comparing it with the views of other philosophers including predecessors contemporaries and successors Principles of Modern Urology R.A.S Hemat,1998-12-31 Principles of Modern Urology is an authoritative guide to urology and integrated urology Principles of Modern Urology is an advanced urological textbook This book begins by showing you how to implement your pathobiology anatomy and physiology into practical simple approach to every client you meet This book was written for medical student resident and professional in medicine and especially urology The author had adapted his proven teaching strategies into a unique approach that makes integrated urology accessible and provides the foundations for understanding urology based upon the principles of structural pathobiology Principles of Modern Urology presents well integrated and practical approach to most urological condition It is a versatile retrievable e book Principles of Modern Urology provides the reader with current concepts of the pathobiology and interventions for diseases Anatomy physiology and radiology are also included within specific topical chapters Principles of Modern Urology is based on the extensive international clinical and teaching experience of the author both in traditional and integrated systems of medical schools Chemical Abstracts ,1925 Genetics and Epigenetics of Fetal Alcohol Spectrum Disorders Feng C. Zhou,Stephen Mason,2015-08-06 Women drinking during pregnancy can result in Fetal Alcohol Spectrum Disorder FASD which may feature variable neurodevelopmental deficits facial dysmorphism growth retardation and learning disabilities Research suggests the human brain is precisely formed through an intrinsic genetic cellular expression that is carefully orchestrated by an epigenetic program This program can be influenced by environmental inputs such as alcohol Current research suggests the genetic and epigenetic elements of FASD are heavily intertwined and highly dependent on one another As such now is the time for investigators to combine genetic genomic and epigenetic components of alcohol research into a centralized accessible platform for discussion Genetic analyses inform gene sets which may be vulnerable to alcohol exposure during early neurulation Prenatal alcohol exposure indeed alters expression of gene subsets including genes involved in neural specification hematopoiesis methylation chromatin remodeling histone variants eye and heart development Recently quantitative genomic mapping has revealed loci QTLs that mediate alcohol induced phenotypes identified between two alcohol drinking mouse strains One question to consider is besides the role of dose and stage of alcohol exposure why only 5% of drinking women deliver newborns diagnosed with FAS Fetal Alcohol Syndrome Studies are ongoing to answer this question by characterizing genome wide expression allele specific expression ASE gene polymorphisms SNPs and maternal genetic factors that influence alcohol vulnerability Alcohol exposure during pregnancy which can lead to FASD has been used as a model to resolve the epigenetic pathway between environment and phenotype Epigenetic mechanisms modify genetic outputs through alteration of 3D chromatin structure and accessibility of transcriptional machinery Several laboratories have reported altered epigenetics including DNA methylation and histone modification in multiple models of FASD During development DNA methylation is dynamic yet orchestrated in a precise

spatiotemporal manner during neurulation and coincidental with neural differentiation Alcohol can directly influence epigenetics through alterations of the methionine pathway and subsequent DNA or histone methylation acetylation Alcohol also alters noncoding RNA including miRNA and transposable elements TEs Evidence suggests that miRNA expression may mediate ethanol teratology and TEs may be affected by alcohol through the alteration of DNA methylation at its regulatory region In this manner the epigenetic and genetic components of FASD are revealing themselves to be mechanistically intertwined Can alcohol induced epigenomic alterations be passed across generations Early epidemiological studies have revealed infants with FASD like features in the absence of maternal alcohol where the fathers were alcoholics Novel mechanisms for alcohol induced phenotypes include altered sperm DNA methylation hypomethylated paternal allele and heritable epimutations These studies predict the heritability of alcohol induced epigenetic abnormalities and gene functionality across generations We opened a forum to researchers and investigators the field of FASD to discuss their insights hypotheses fresh data past research and future research themes embedded in this rising field of the genetics and epigenetics of FASD This eBook is a product of the collective sharing and debate among researchers who have contributed or reviewed each subject **Revue b n dictine** ,1925 Includes sections Comptes rendus and Notes bibliographiques
