physical testing were combined to make final recommendations about selecting and operating maintenance cleaning equipment. From the results of the lab phase of this study it can be concluded that there are no absolutely safe operational settings below which damage cannot occur and above which it will always occur. From the results of the field phase of this study it can be concluded that the washer's pressure and temperature above minimums of 500 psi 3445 kPa and 110 F 43 C have little effect on the time required to clean any particular vehicle.
