Introduction to Integrated Pest Management M.L. Flint, R. van den Bosch, 2012-12-06 Integrated control of pests was practiced early in this century well before anyone thought to call it integrated control or still later integrated pest management IPM which is the subject of this book by Mary Louise Flint and the late Robert van den Bosch USDA entomologists W D Hunter and B R Coad recommended the same principles in 1923 for example for the control of boll weevil on cotton in the United States In that program selected pest tolerant varieties of cotton and residue destruction were the primary means of control with insecticides considered supplementary and to be used only when a measured incidence of weevil damage occurred Likewise plant pathologists had also developed disease management programs incorporating varietal selection and cultural procedures along with minimal use of the early fungicides such as Bordeaux mixture These and other methods were practiced well before modern chemical control technology had developed Use of chemical pesticides expanded greatly in this century at first slowly and then following the launching of DDT as a broadly successful insecticide with rapidly increasing momentum In 1979 the President's Council on Environmental Quality reported that production of synthetic organic pesticides had increased from less than half a million pounds in 1951 to about 1.4 billion pounds or about 3000 times as much in 1977 *Scientific Guide to Pest Control Operations* Lee C. Truman, Gary W. Bennett, William L. Butts, 1979

Contingency Pest Management Guide. 2010 Edition, 2010 The purpose of the Contingency Pest Management Guide is to provide basic information on using pesticides to control insects that transmit disease and other pests during deployment situations worldwide Use pesticides only as part of an integrated pest management IPM program IPM is an approach that combines a variety of pest management methods including physical mechanical educational biological and chemical to prevent medical injury or economic damage from pests and disease vectors This Guide is not intended to be a substitute for the instructions found on all pesticide labels Remember when applying pesticides around U S personnel or as part of a U S operation the pesticide label is the law This guide is intended to assist DoD service members civilians and contract personnel plan for and perform best pest management practices during contingency operations in the absence of a formalized Theater or an installation base camp approved IPM Plan When such a plan exists that document takes precedence over this technical guide Commanders are responsible for implementing a pest management program to include a pest management plan and a plan should be written and implemented for any operation that is expected to endure for an extended period
