Timokhov, 2012-12-06 The Arctic and its surrounding marginal seas are considered some of the most sensitive elements of the global environment which may respond rapidly to climate change However due to various reasons our knowledge of the processes which drive the Arctic system today and in the past is still relatively sparse Based on a multidisciplinary approach German and Russian scientists describe in this book the natural paleorecords and modern data which were collected over the past 6 years These marine and terrestrial datasets provide important new insights into the causes impacts and feedback mechanisms of this extreme Arctic environment

Spatial Pattern in Plankton Communities John H. Steele, 2014-07-08 The planning for the conference held at Erice Sicily in November 1977 began with discussions among oceanographers from several countries on the need to consider the special problems and the recent results in the study of plankton patchiness An approach to the Marine Sciences Panel of the NATO Science Committee resulted in a planning grant to determine the probable content and participation in such a meeting The planning group consisted of B Battaglia Padua G E B Kullenberg Copenhagen A Okubo New York T Platt Halifax Nova Scotia and J H Steele Aberdeen The group met in Aberdeen Scotland in September 1976 The proposal for a NATO School on the subject of Spatial Pattern in Plankton Communities was accepted by the Marine Science Panel and it was agreed that it be held at the Ettore Majorana Centre for Scientific Culture in Erice The Centre began in 1963 with an International School of Subnuclear Physics and has since developed to include courses in many other subjects which cover various fields of basic and applied research The original aim of the Centre was to create in Italy a cultural forum of high scientific standard which would allow young research workers to appreciate problems currently of major interest in various fields of research

Hastings,Thomas Cradock Hepworth,A. Horsley Hinton,1913 **Dynamics of Water Surface Flows and Waves** Yasunori

Watanabe,2022-11-11 Dynamics of Water Surface Flows and Waves provides theoretical descriptions of the whole life of water surface waves through their birth propagation evolution and finally breaking While initial capillary waves are created via instability at air water interfaces potential wave theories adequately describe interactions of waves with current bathymetry and structure In the final breaking stage potential fluid motions in the waves rapidly evolve into vortical turbulent flows that disturb the surfaces resulting in entrainment of air bubbles and ejection of sea spray in bursting bubbles floating on the surface All theories and analytical methods required to understand the series of wave processes over diverse areas of subjects including turbulence diffusion vortex and capillary dynamics shallow water approach and stability analysis as well as the conventional potential wave theory are comprehensively covered in this book All of the mathematical formulas are consistently developed from theorems and linked with physics which provides theoretical understanding and further interest in wave dynamics This is an ideal graduate level textbook or reference for engineers and researchers in the fields of fluid and wave mechanics coastal and ocean engineering
