Excavations at Nichoria in Southwest Greece , Understanding the Changing Planet National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on Strategic Directions for the Geographical Sciences in the Next Decade, 2010-07-23 From the oceans to continental heartlands human activities have altered the physical characteristics of Earth s surface With Earth s population projected to peak at 8 to 12 billion people by 2050 and the additional stress of climate change it is more important than ever to understand how and where these changes are happening Innovation in the geographical sciences has the potential to advance knowledge of place based environmental change sustainability and the impacts of a rapidly changing economy and society Understanding the Changing Planet outlines eleven strategic directions to focus research and leverage new technologies to harness the potential that the geographical sciences offer Reporting Climate Change in the Global North and South Jahnnabi Das, 2019-08-29 This book reveals how journalists in the Global North and Global South mediate climate change by examining journalism and reporting in Australia and Bangladesh This dual analysis presents a unique opportunity to examine the

impacts of media and communication in two contrasting countries in terms of economy income and population size which both face serious climate change challenges In reporting on these challenges journalism as a political institutional and cultural practice has a significant role to play It is influential in building public knowledge and contributes to knowledge production and dialogue however the question of who gets to speak and who doesn't is a significant determinant of journalists capacity to establish authority and assign cultural meaning to realities By measuring the visibility from presences and absences the book explores the extent to which the influences are similar or different in the two countries contrasting how journalists communication power conditions public thought on climate change The investigation of climate communication across the North South divide is especially urgent given the global commitment to reduce greenhouse gas emissions and it is critical we gain a fuller understanding of the dynamics of climate communication in low emitting low income countries as much as in the high emitters high income countries This book contributes to this understanding and highlights the value of a dual analysis in being able to draw out parallels as well as divergences which will directly assist in developing cross national strategies to help address the mounting challenge of climate change This book will be of great interest to students and scholars of climate change and environmental journalism as well as media and communication studies more broadly

Climate Crisis Economics Stuart P. M. Mackintosh, 2021-08-31 Climate Crisis Economics draws on economics political economy scientific literature and data to gauge the extent to which our various communities political economic business are making the essential leap to a new narrative and policy approach that will accelerate us towards the necessary transition to a decarbonized economy and sustainable future The book draws out policies and practices with both national and local examples which will demonstrate various complementary approaches that are empowering states and people as they seek to pursue the carbon neutral goal The author delineates a climate crisis economics approach that is fit for purpose and which can help achieve necessary climate change goals in the decades ahead Ensuring economic and ecological sustainability is neither easy nor cost free there is no single solution to the climate crisis All aspects of our economies policies business and personal practices must come into alignment in order to succeed Frustratingly we know what is needed and we have many of the technologies and systems to make the leap to a carbon neutral economy yet we still fail to act with alacrity Leaders communities and businesses must shift their narratives in how they talk about and think about the climate crisis In doing so in making the narrative leap to a new understanding about what is possible and necessary we can stop endangering our common future and single fragile global habitat and instead set the stage for Green Globalisation 2.0 and a new sustainable industrial revolution Climate Crisis Economics will appeal to academics students investors and professionals from varying disciplines including politics international political economy and international economics Written in an accessible voice it draws on work in fields outside of and in addition to politics and economics to make a case for climate crisis economics as an approach to addressing the climate change challenge ahead The Open Access

Asian Change in the Context of Global Climate Change James Galloway, Jerry Melillo, 1998-09-28 Nearly two thirds of the world's population live in Asia and many countries in that region are currently undergoing very rapid industrial agricultural and economic development The Framework Convention on Climate Change constrains developed countries with regard to their future emissions of greenhouse gases but recognizes the special needs of developing countries There is growing appreciation of the ways in which developing countries in the Asian region both contribute to global changes by altering biogeochemical pathways and cycles and are themselves affected by those changes This volume uses the intellectual efforts and findings of the International Geosphere Biosphere Programme IGBP community to provide the first integrated analysis of the interactions between global change and Asian change giving particular attention to China's role The book will be of interest to readers in a wide range of academic disciplines natural sciences and socio economic and for those involved in national and international policy development relevant to global change

Global Environmental Change and Land Use Han Haarman, A. Verhagen, C.A. Rovers, 2013-03-14 The interaction between environmental change and human activities is complex requiring the concepts and tools of a number of disciplines for its effective analysis Land use and land cover change has only recently become a topic susceptible to scientific research as these concepts and tools have been developed and made available Rooted in a broad community concerned with global change systematic research has begun into land use systems at different scales and interactions and their links with global cycles of water nitrogen and carbon are being explored Partly based on research initiated by the Dutch National Research Programme on Global Air Pollution and Climate Change NRP this book touches upon various land use and land cover issues in relation to global environmental change In addition to the biogeochemical cycles land as a carrier for functions of economic activities food and fibre production and energy production via biomass are discussed Crucial in studying land use is human behaviour and man environment interaction at different scales Land use and land cover change is an important contributor of greenhouse gases as these activities directly interfere with the carbon nitrogen and water cycles These cycles are connected through numerous feedback loops The interface of land use and climate is essentially determined by the interaction of man and the environment Man uses land primarily to produce food a relatively small area is needed for urban development
