Scientific Perspectivism Ronald N. Giere, 2024-05-31 Many people assume that the claims of scientists are objective truths But historians sociologists and philosophers of science have long argued that scientific claims reflect the particular historical cultural and social context in which those claims were made The nature of scientific knowledge is not absolute because it is influenced by the practice and perspective of human agents Scientific Perspectivism argues that the acts of observing and theorizing are both perspectival and this nature makes scientific knowledge contingent as Thomas Kuhn theorized forty years ago Using the example of color vision in humans to illustrate how his theory of perspectivism works Ronald N Giere argues that colors do not actually exist in objects rather color is the result of an interaction between aspects of the world and the human visual system Giere extends this argument into a general interpretation of human perception and more controversially to scientific observation conjecturing that the output of scientific instruments is perspectival Furthermore complex scientific principles such as Maxwell's equations describing the behavior of both the electric and magnetic fields make no claims about the world but models based on those principles can be used to make claims about specific aspects of the world Offering a solution to the most contentious debate in the philosophy of science over the past thirty years Scientific Perspectivism will be of interest to anyone involved in the study of science

Methodological Reflections on Practice Oriented Theories Michael Jonas,Beate Littig,Angela Wroblewski,2017-02-16 This volume presents a comprehensive overview of methodological issues and empirical methods of practice oriented research It examines questions regarding the scope and boundaries of practice

oriented approaches and practice theory It discusses the potential advantages and disadvantages of the diversity resulting from the use of these approaches as well as method and methodology related issues The specific questions explored in this volume are What consequences are linked to the application of a praxeological perspective in empirical research when it comes to the choice of methods Is there such a thing as an ideal path to follow in praxeological empirical research What relationship is there between qualitative and quantitative approaches What differentiates practice based social research from other perspectives and approaches such as discourse analysis or hermeneutics The contributions in this book discuss these questions either from a methodological point of view or from a reflective perspective on empirical research practices The ^AOxford Handbook of Improvisation in Dance Vida L. Midgelow, 2019-02-21 This handbook offers new arguments about the ways that dance improvisation informs understandings of history socio cultural conditions lived experience and technologies

Evolutionary Thinking Across Disciplines Agathe du Crest, Martina Valković, André Ariew, Hugh Desmond, Philippe Huneman, Thomas A. C. Reydon, 2023-06-26 This volume aims to clarify the epistemic potential of applying evolutionary thinking outside biology and provides a survey of the current state of the art in research on relevant topics in the life sciences the philosophy of science and the various areas of evolutionary research outside the life sciences By bringing together chapters by evolutionary biologists systematic biologists philosophers of biology philosophers of social science complex systems modelers psychologists anthropologists economists linguists historians and educators the volume examines evolutionary thinking within and outside the life sciences from a multidisciplinary perspective While the chapters written by biologists and philosophers of science address theoretical aspects of the guiding questions and aims of the volume the chapters written by researchers from the other areas approach them from the perspective of applying evolutionary thinking to non biological phenomena Taken together the chapters in this volume do not only show how evolutionary thinking can be fruitfully applied in various areas of investigation but also highlight numerous open problems unanswered questions and issues on which more clarity is needed As such the volume can serve as a starting point for future research on the application of evolutionary thinking across disciplines *Principles and Practice of Case-based Clinical Reasoning Education* Olle ten Cate, Eugène J.F.M. Custers, Steven J. Durning, 2017-11-06 This book is open access under a CC BY 4.0 license This volume describes and explains the educational method of Case Based Clinical Reasoning CBCR used successfully in medical schools to prepare students to think like doctors before they enter the clinical arena and become engaged in patient care Although this approach poses the paradoxical problem of a lack of clinical experience that is so essential for building proficiency in clinical reasoning CBCR is built on the premise that solving clinical problems involves the ability to reason about disease processes This requires knowledge of anatomy and the working and pathology of organ systems as well as the ability to regard patient problems as patterns and compare them with instances of illness scripts of patients the clinician has seen in the past and stored in memory CBCR stimulates the development of early rudimentary illness scripts through elaboration and

systematic discussion of the courses of action from the initial presentation of the patient to the final steps of clinical management The book combines general backgrounds of clinical reasoning education and assessment with a detailed elaboration of the CBCR method for application in any medical curriculum either as a mandatory or as an elective course It consists of three parts a general introduction to clinical reasoning education application of the CBCR method and cases that can be used by educators to try out this method

Philosophy Of Biology Elliott Sober, 2018-03-05 Perhaps because of its implications for our understanding of human nature recent philosophy of biology has seen what might be the most dramatic work in the philosophies of the special sciences This drama has centered on evolutionary theory and in the second edition of this textbook Elliott Sober introduces the reader to the most important issues of these developments With a rare combination of technical sophistication and clarity of expression Sober engages both the higher level of theory and the direct implications for such controversial issues as creationism teleology nature versus nurture and sociobiology Above all the reader will gain from this book a firm grasp of the structure of evolutionary theory the evidence for it and the scope of its explanatory significance

The History and Theory of Rhetoric Luke Winslow, James A. Herrick, 2025-08-19 By tracing the traditional progression of rhetoric from the Greek Sophists to contemporary theorists this updated eighth edition gives students a conceptual framework for evaluating and practicing persuasive writing and speaking in a wide range of settings including written visual and digital media Through an expansive historical purview the book illustrates how persuasive public discourse performs essential social functions and shapes our societies drawing on the ideas of many of history's greatest thinkers and theorists This new edition includes an integrated exploration of non-Western rhetorics an updated account of contemporary rhetoric and an enhanced analysis of rhetorical theory in a digital age Known for its clear writing style and contemporary examples throughout *The History and Theory of Rhetoric* emphasizes the relevance of rhetoric to today's students This revised edition serves as a core textbook for rhetoric courses in both English and communication programs covering both the historical tradition of rhetoric and contemporary rhetoric studies A suite of online resources including a detailed instructor's manual PowerPoint slides and videos from Dr Winslow can be found on the Instructor and Student Resources website at www.routledgelearning.com/historyofrhetoric

Issues in Science and Theology: What is Life? Dirk Evers, Michael Fuller, Antje Jackelén, Knut-Willy Sæther, 2015-06-03 This book explores the concept of Life from a range of perspectives Divided into three parts it first examines the concept of Life from physics to biology It then presents insights on the concept from the perspectives of philosophy theology and ethics The book concludes with chapters on the hermeneutics of Life and pays special attention to the Biosemiotics approach to the concept The question What is Life has been deliberated by the greatest minds throughout human history Life as we know it is not a substance or fundamental property but a complex process It is not an easy task to develop an unequivocal approach towards Life combining scientific semiotic philosophical theological and ethical perspectives In its combination of these perspectives and its wide ranging scope this book opens up levels and

identifies issues which can serve as intersections for meaningful interdisciplinary discussions of Life in its different aspects The book includes the four plenary lectures and selected revised and extended papers from workshops of the 14th European Conference on Science and Theology ECST XIV held in Tartu Estonia April 2012 *The Advancement of Science : Science without Legend, Objectivity without Illusions* San Diego Philip Kitcher Professor of Philosophy University of California,1993-05-06 During the last three decades reflections on the growth of scientific knowledge have inspired historians sociologists and some philosophers to contend that scientific objectivity is a myth In this book Kitcher attempts to resurrect the notions of objectivity and progress in science by identifying both the limitations of idealized treatments of growth of knowledge and the overreactions to philosophical idealizations Recognizing that science is done not by logically omniscient subjects working in isolation but by people with a variety of personal and social interests who cooperate and compete with one another he argues that nonetheless we may conceive the growth of science as a process in which both our vision of nature and our ways of learning more about nature improve Offering a detailed picture of the advancement of science he sets a new agenda for the philosophy of science and for other science studies disciplines **Annual Report of the Bureau of Ethnology to the Secretary of the Smithsonian Institution** Smithsonian Institution.
