

Electric Voith Schneider Propeller (eVSP) Sustainable mobility for maritime applications

With the electric Voith Schneider Propeller (eVSP), we are taking an important step towards the electrification of the drivetrain in marine applications and thus to a shipping industry that is even more eco-friendly. In our capacity as technology partner to our customers, we are actively driving the global mobility transition.

The eVSP combines all the advantages of the Voith Schneider Propeller (VSP) with the electric motor of the Voith Inline Thruster. The result is a reliable, energy-efficient, environmentally friendly and compact drive unit that is ideal for use in yachts, ferries, tugs, tenders and passenger vessels, and in offshore applications. Like the conventional VSP, the eVSP achieves maximum thrust in all directions, continuously variable and with maximum precision.

The powerful, directly integrated electric motor (permanent magnet motor) delivers high torque and a fast response without any gears whatsoever. This means that it ensures

a more direct and almost loss-free conversion of the electrical drive power into thrust, while keeping noise emissions to a minimum. Due to the low maintenance requirement for the robust electric propeller, the subsequent costs for servicing are drastically reduced.

Customer benefits and advantages

- Proven technologies for reliable performance
- Efficient electric drive system for maximum effectiveness
- Compact design to suit individual requirements
- Improved sustainability

Voith Vsp Service Manual:

The Voith-Schneider Propeller as a Model Ship Propulsion System Kurt Benz, What even the most attentive observer of model ship events or championships might not have noticed so far is the fact that almost no model ships equipped with Voith model propellers are to be seen This does not only apply to our nation the actual manufacturing country of this propulsion system but also in model building circles of other countries nothing positive is to be reported in this respect In general it seems to the author the existence of this drive is hushed up in modeling circles The reason is most likely the lack of know how This is in no way intended to cast doubt on the technical qualities of the model builders but rather to express the fact that there is still no useful documentation on model Voith Schneider propellers A circumstance which is to change with the construction description found in this book At this point the author would also like to dispel the widespread opinion that the Voith Schneider propeller is a miracle or even a witch s work and can only be understood or produced by model builders with above average technical skills With regard to production it must be said that it can be made by any reasonably technically skilled model builder *Southern Africa Shipping News* ,2008
