The Mantle and Core R.W. Carlson, 2005-11-22 Though largely inaccessible the geochemistry of Earth's mantle and core can be examined through a wide variety of approaches Volume 2 focuses first on remote sensing using evidence from cosmochemical seismic petrologic and geochemical approaches Mantle composition is then examined in detail through descriptions of mantle samples brought to Earth's surface through tectonic volcanic and volatile outgassing processes The volume concludes with examination of processes that modify the composition of the mantle and core including an early magma ocean partial melting element partitioning between minerals and melts and physical mixing caused by plate subduction mantle convection and mass exchange between mantle and core Reprinted individual volume from the acclaimed *Treatise on Geochemistry* 10 Volume Set ISBN 0 08 043751 6 published in 2003 Comprehensive and authoritative scope and focus Reviews from renowned scientists across a range of subjects providing both overviews and new data supplemented by extensive bibliographies Extensive illustrations and examples from the field

Road from Geochemistry to Geochemometrics Surendra P. Verma, 2019-08-16 This book highlights major problems in the statistical analysis of compositions that have been known for over a century as well as the corresponding solutions that have been put forward by specialists over the past 30 years The basic assumptions of normality or multi normality are pointed out and methods to test and achieve them are also covered The conventional major and trace element geochemistry and modeling equations are discussed and are followed by a more sophisticated multidimensional approach to data handling The book's main focus is on the use of statistical techniques to facilitate data interpretation It also highlights the classification or nomenclature and tectonic discrimination aspects for both igneous and sedimentary rocks The book concludes by discussing computer programs that are helping pave the way from geochemistry to geochemometrics Written by a leading expert in the area of geochemistry it offers a valuable guide for

Mundra, 2024-11-22 Mycorrhizal symbioses a mutual association between plants and fungi plays a vital role in shaping and balancing the ecosystem of our planet Approximately 80% of vascular plant species form mycorrhizal associations between their roots and soil borne fungi Moreover such association between plants and mycorrhizal fungi drastically affect the water and nutrient absorption by plant roots as well as provides protection against soil borne pathogens Hence mycorrhizal symbioses might be advantageous for plants and our ecosystem under the drastically changing climate which is threatening and distorting our ecosystem Threats to our ecosystem should therefore encourage investigations and inventories of mycorrhizal diversity function and their application Although numerous research has been done in this area some issues remain unsolved because of the dramatic diversity of mycorrhizal associations along with their specificity in response to host plants especially under different climate and soil conditions in different ecosystems Therefore the collection under this research topic aim to provide up to date applicative thorough studies on mycorrhizal symbioses through ecological perspective For this Research Topic we welcome both reviews and original articles that address the following research agenda but not limited to the diversity structure and function of mycorrhizal fungi associated with plants trees crops in different ecosystems the impacts of mycorrhizae on plant species under different environmental condition i e warmer climate drought the interaction between mycorrhizal fungi and plant species in soil with different water level nutrients and salinity the application of the mycorrhizae on regeneration and dynamics of ecosystems as well as their biomass production

Neurodevelopmental disorders are generally influenced by genetic as well as intrauterine and extrauterine factors that affect the fetal maternal environment and or brain development that continues after birth Specific genetic polymorphisms may increase susceptibility to environmental factors that alter the trajectory of brain development via diverse molecular mechanisms In particular the pre and post natal exposure to neurotoxic metals pesticides persistent organic pollutants and other chemicals is increasingly recognized as involved in the pathogenesis of neurodevelopmental disorders such as autism deficiency attention hyperactivity disorders neurodegenerative disorders such as Parkinson s and Alzheimer s disease chronic multiple sclerosis and even fetal and infant death including SIUDS Sudden Unexplained Intrauterine Death Syndrome and SIDS Sudden Infant Death Syndrome Advances in Novel Natural Product Pesticides Pei Li,Hu Li,Jiwen

Peter,2025-05-08 Beginning in December 2019 the world saw the rise and rapid spread of the COVID 19 disease which eventually became a global pandemic The first wave and second waves were very severe causing widespread mortality Subsequent waves the third and fourth waves though not as severe have also seen fatalities

The development of vaccines and improved knowledge greatly contributed to the reduction in severity and fatality. However, a new problem has emerged. One of the characteristic features of COVID-19 disease was hyperinflammation. This hyperinflammation involved multiple inflammatory pathways and was characterized by elevated levels of cytokines promoting coagulation dysfunction, causing tissue damage, sepsis, and organ failure. It has been well established that this was one of the mechanisms the causative agent of COVID-19, SARS-CoV-2, exploited. The widespread uncontrolled inflammation was the major cause of disease severity and mortality, and a chief reason that anti-inflammatory drugs such as corticosteroids and monoclonal antibodies targeting signaling pathways formed a major part of the treatment of COVID-19.
