Spacesuits The Smithsonian National Air And Space:

Spacesuits Amanda Young, 2009-05-05 The goal of landing a man on the Moon and returning him safely to Earth required the development of three things spacecraft launch vehicles and protective clothing Spacesuits Within the Collections of the Smithsonian National Air and Space Museum takes the reader through the development of the last category the spacesuits used during this venture Highlighting the pressure suits created during the years leading up to the lunar missions and beyond this book features dramatic photographs of the Smithsonian's collection as well as never before published historical images of spacesuit development and testing range of motion studies for example in which researchers wore spacesuits while playing baseball and football The book also includes a group of advanced spacesuits which though never used on a mission are in many respects the most exciting suits ever created One suit glove has steel fingernails and sharkskin pads in an attempt to harness the abilities of the human hand Spacesuits are surprisingly fragile they are made for a short lifespan in the most extreme of conditions and long term survival is not part of their design process The final chapter touches briefly on the current conditions of historic suits how they have held up over time the reasons for their deterioration and the rewards and difficulties associated with caring for and preserving these very complex and iconic artifacts From the first spacesuit designs of the 1930s through those worn on the landmark Apollo Soyuz program of 1975 Spacesuits provides a behind the scenes look at the history of these remarkable creations including some that have never before been publicly displayed **Smithsonian National Air and Space Museum** Michael J. McMann, 2007-09-11 Ken Thomas and Joe McMann have produced a magnificent treatise on spacesuits spacewalking life support systems and escape systems *US Spacesuits* is historical massively comprehensive precise informative relevant and readable As an astronaut I spent 30 years in their world and in their suits My life was in their hands I trained on the Apollo and Skylab systems I assisted in the development of the Skylab extravehicular activity EVA procedures and was a capsule communicator capcom on six of the Skylab walks I helped them in the development and testing of the shuttle suits escape systems and all the spacewalking equipment Together with Don Peterson I was the first astronaut to test the material in space and I was the lead walker in the initial repair of the Hubble Space Telescope In this book I am able to relive a lot of my 30 years in that world and gain new insights and perspectives on those experiences This book is an accurate and detailed history It is a comprehensive chronology but it is also much more It not only tells and shows what happened but it deals with how and why things happened It addresses the hardware and processes that came into

fruition and very importantly also addresses the options that might have occurred but did not. Recapturing a Future for Space Exploration National Research Council,Division on Engineering and Physical Sciences,Aeronautics and Space Engineering Board,Space Studies Board,Committee for the Decadal Survey on Biological and Physical Sciences in Space,2012-01-30 More than four decades have passed since a human first set foot on the Moon Great strides have been made in our understanding of what is required to support an enduring human presence in space as evidenced by progressively more advanced orbiting human outposts culminating in the current International Space Station ISS However of the more than 500 humans who have so far ventured into space most have gone only as far as near Earth orbit and none have traveled beyond the orbit of the Moon Achieving humans further progress into the solar system had proved far more difficult than imagined in the heady days of the Apollo missions but the potential rewards remain substantial During its more than 50 year history NASA s success in human space exploration has depended on the agency s ability to effectively address a wide range of biomedical engineering physical science and related obstacles an achievement made possible by NASA s strong and productive commitments to life and physical sciences research for human space exploration and by its use of human space exploration infrastructures for scientific discovery The Committee for the Decadal Survey of Biological and Physical Sciences acknowledges the many achievements of NASA which are all the more remarkable given budgetary challenges and changing directions within the agency In the past decade however a consequence of those challenges has been a life and physical sciences research program that was dramatically reduced in both scale and scope

with the result that the agency is poorly positioned to take full advantage of the scientific opportunities offered by the now fully equipped and staffed ISS laboratory or to effectively pursue the scientific research needed to support the development of advanced human exploration capabilities. Although its review has left it deeply concerned about the current state of NASA's life and physical sciences research, the Committee for the Decadal Survey on Biological and Physical Sciences in Space is nevertheless convinced that a focused science and engineering program can achieve successes that will bring the space community the U.S. public and policymakers to an understanding that we are ready for the next significant phase of human space exploration. The goal of this report is to lay out steps and develop a forward looking portfolio of research that will provide the basis for recapturing the excitement and value of human spaceflight thereby enabling the U.S. space program to deliver on new exploration initiatives that serve the nation, excite the public and place the United States again at the forefront of space exploration for the global good.

Spacesuit Nicholas De Monchaux, 2011-03-18 How the twenty one layer Apollo spacesuit made by Playtex was a triumph of intimacy over engineering. When Neil Armstrong and Buzz Aldrin stepped onto the lunar surface in July of 1969 they wore spacesuits made by Playtex, twenty one layers of fabric each with a distinct yet interrelated function custom sewn for them by seamstresses whose usual work was fashioning bras and girdles. This book is the story of that spacesuit. It is a story of the triumph over the military industrial complex by the International Latex Corporation, best known by its consumer brand of Playtex, a victory of elegant softness over engineered hardness of adaptation over cybernetics. Playtex's spacesuit went up against hard armor like spacesuits designed by military contractors and favored by NASA's engineers. It was only when those attempts failed when traditional engineering firms could not integrate the body into mission requirements that Playtex with its intimate expertise got the job. In *Spacesuit* Nicholas de Monchaux tells the story of the twenty one layer spacesuit in twenty one chapters addressing twenty one topics relevant to the suit, the body and the technology of the twentieth century. He touches among other things on eighteenth century androids, Christian Dior's New Look, Atlas missiles, cybernetics and cyborgs, latex, JFK's carefully cultivated image, the CBS lunar broadcast, soundstage, NASA's Mission Control and the applications of Apollo style engineering to city planning. The twenty one layer spacesuit de Monchaux argues offers an object lesson. It tells us about redundancy and interdependence and about the distinctions between natural and man made complexity; it teaches us to know the virtues of adaptation and to see the future as a set of possibilities rather than a scripted scenario.

Hidden Treasures Harriet Baskas, 2013-10-01 While there are more than 15,000 museums in our country, visitors get to see only about five percent of any institution's collections. Most museums simply don't have room to display everything they've got. However, there are a wide variety of surprising and intriguing reasons that, for example, the Smithsonian Institution doesn't display its collection of condoms. Florida's Lightner Museum locks up all but one of its shrunken heads and a world class stash of Japanese erotica. Shunga art was kept in the Honolulu Museum of Art's storage until only recently. Each item or collection included in this volume is described and placed

in context with stories and interviews that explore the historical social cultural political environmental or other circumstances that led to keeping that object or group of objects out of public view the ultimate museum buff's voyeuristic experience Color photographs of the artifacts are included **The Evolution of Space Suits Guided Reading 6-Pack**
