The Innovation for Development Report 2009-2010

A. López-Claros, 2009-11-18 The relative importance of various drivers of economic growth and prosperity has evolved over time and for a growing number of countries innovation in its many dimensions is emerging as a leading factor The Innovation for Development Report provides a comprehensive look at the role of innovation in enhancing the development process

The Digital Economy Edward J. Malecki, Bruno Moriset, 2007-12-07 Information technologies IT shape economic space but we have no clear map of the cyber economy since the digital revolution began in the early 1970s The Digital Economy offers an up to date critical synthesis that links the various aspects of the digital or cyber economy from the perspective of real firms A geographic approach emphasizes how IT has made businesses less dependent on locational constraints and the tangible effects on places and regions are placed at the core of the analysis Case studies of companies including Amazon Dell Li Fung and Volvo demonstrate that the geography of digitally driven production is the outcome of both dispersion and agglomeration dynamics Global corporations are shown to have footprints that ignore to some degree distance and time yet creative and coordinating activities remain anchored in urban innovative ecosystems such as Silicon Valley and Bangalore These trends have been made possible by the development of a worldwide and integrated telecommunications network whose unequal presence dictates the capabilities of places and communities to be connected to the global economy However the threat of the digital divide must not be overstated In cities rural areas and emerging countries local development is wrapped up in human capital rather than technology This engaging and accessible text describes and explains the patterns and dynamics of today's digital economic space The effects on places and regions and the people in them are at the core of the authors analysis illustrated by many real examples This book will be useful to anyone studying business and management geography and information and communication studies

Schwab, 2008

The Information Society in an Enlarged Europe Soumitra Dutta, Arnoud De Meyer, Amit Jain, Gérard

Richter, 2006-11-22 Europe enlarged its boundaries in 2004 with the accession of ten new member states to the European Union The creation of an effective information society is seen as critical to the global competitiveness of Europe Based upon detailed data collection and rigorous analysis the book presents a benchmarking study of the 10 new member states and 3 candidate countries of the European Union as compared to the 15 incumbent countries with respect to the development of their information societies Using a framework based on the Europe 2005 benchmarking framework the 28 EU members and candidate countries are ranked according to their level of information society development and then classified into 4

categories The results presented in this book are of importance to all managers and companies doing business in the IT sector in the European Union na Springer,2013-02-14 **E-development** Robert Schwarc,2005-01-01 Information and communication technologies ICTs are increasingly being recognized as essential tools of development tools that can empower poor people enhance skills increase productivity and improve governance at all levels The success of ICT enabled development or e development will thus not be measured by the diffusion of technology but by advances in development itself economic growth and ultimately achievement of the Millenium Development Goals This volume examines a wide range of issues related to e development with a focus on the requirements and realities of using ICTs to advance development goals The report does not attempt to present a comprehensive overview of e development Rather it highlights key issues that have immediate relevance to policy makers in developing nations who make decisions on investments and development goals It highlights two issues in particular e government and e education because ICT applications in these areas can lead to significant development outcomes and can also be successfully deployed through public private partnerships leveraging limited government funding to achieve greater impact *Internet Banking and the Law in Europe* Apostolos Ath. Gkoutzinis,2006-11-02 The European Union has long sought to create a single financial area across Europe where consumers in one country benefit from financial markets and activities in other countries With the emergence of the Internet as a platform for the provision of online banking services the creation of a pan European market for banking services appeared a realistic proposition In practice however this has not happened This book asks why and argues that the creation of banking markets via the Internet relies on both available technologies and appropriate laws and regulations The institutional and legal framework for online banking services in the single European market are examined as is the level of legal harmonization achieved in the UK France and Germany under the influence of the EU Directives pertaining to online banking activities **Transforming Government and Building the Information Society** Nagy K. Hanna,2010-03-20 Information and communication technology ICT is central to reforming governance innovating public services and building inclusive information societies Countries are learning to weave ICT into their strategies for transforming government as enterprises have learned to use ICT to innovate and transform their processes and competitive strategies ICT enabled transformation offers a new path to digital era government that is responsive to the challenges of our time It facilitates innovation partnering knowledge sharing community organizing local monitoring accelerated learning and participatory development In *Transforming Government and Building the Information Society* Nagy Hanna draws on multi disciplinary research on ICT in the public sector and on his rich experience of over 35 years at the World Bank and other aid agencies to identify the key ingredients for the strategic integration of ICT into governance and poverty reduction strategies The author showcases promising practices from around the world to outline the strategic options involved in using ICT to maximize developmental impact transforming government institutions and public services and empowering communities for inclusion and grassroots

innovation Despite the ICT promise Hanna acknowledges that reforming governance and empowering poor communities are difficult long term undertakings Hanna moves beyond the imperatives and visions of e transformation to strategic design and implementation options and draws practical lessons for policymakers reformers innovators community leaders ICT specialists and development experts **e-Transformation: Enabling New Development Strategies** Nagy K. Hanna,2009-11-11

Could information and communication technology ICT become the transformative tool for a new style of global development Could ICT promote knowledge based innovation driven and smart adaptive participatory development As countries seek a way out of the present period of economic contraction they are trying to weave ICT into their development strategies in the same way organizations have learned to use ICT to transform their business models and strategies This integration offers a new path to development that is responsive to the challenges of our times In e Transformation Nagy Hanna identifies the key ingredients for the strategic integration of ICT into national development with examples from around the world He draws on his rich experience of over 35 years at the World Bank and other aid agencies to outline the strategic options involved in using ICT to maximize developmental impact transforming public service institutions networking businesses for innovation and competitiveness and empowering communities for social inclusion and poverty reduction He identifies the key interdependencies in e transformation and offers a holistic framework to tap network effects and synergies across all elements of the process including leadership cyber policies institutions human resources technological competencies information infrastructure and ICT uses for government business and society Integrating analytical insights and practical applications across the fields of development political economy public administration entrepreneurship and technology management the author candidly argues that e transformation like all bold ideas faces implementation challenges In particular the aspiration reality gap needs to be systematically addressed if ICT enabled innovation and transformation is to become a development practice E transformation is first and foremost about thinking strategically and creatively about the options made possible by the information technology revolution in the context of globalization To this end the author provides tools and best practices designed to nurture innovation select entry points prioritize among competing demands and sequence and scale up He outlines the roles of all participants political managerial entrepreneurial social and technical whose leadership is essential for successful innovation Encyclopedia of Digital Government Anttiroiko, Ari-Veikko,Malkia, Matti,2006-07-31 Containing more than 250 articles this three volume set provides a broad basis for understanding issues theories and applications faced by public administrations and public organizations as they strive for more effective government through the use of emerging technologies This publication is an essential reference tool for academic public and private libraries **Liberalization and Regulation of the Telecommunications Sector in Transition Countries**

Ekaterina Markova,2008-11-14 Telecommunications are increasingly recognized as a key component in the infrastructure of economic development For many years there were state owned monopolies in the telecommunications sector In transition

economies they were characterized by especially poor performance and high access deficits as telecommunications were considered to be a non profit oriented production process intended to support the socio economic superstructures As a result the starting point for the reform processes in transition countries was quite poor performed public monopolies functioned under completely different circumstances as the peers in the market economies The main question of this book is what the strategies for the successful future development of the telecommunications sector in transition countries are The special focus is on Russia the largest of the transition countries Enabling Enterprise Transformation Nagy K. Hanna,2009-12-11 Private enterprises in advanced economies have been learning to use information and communication technology ICT to innovate and transform their processes products services and business models significantly improving productivity and competitiveness Moreover the ICT industry itself has become a major source of job creation and a contributor to economic growth and business transformation A key question today is whether and how developing countries can learn to benefit from the ICT revolution and what roles the government and private sector can play Already a number of developing countries have been inspired by the example of India and China and are now seeking to jump on the outsourcing bandwagon Nevertheless with few exceptions in the developing world little attention has been paid by policymakers and practitioners to invest systematically and proactively in ICT enabled growth poverty reduction and grassroots innovation Most communities and small and medium sized enterprises in developing countries for example face multiple constraints to adopting and leveraging this general purpose technology and lack the capabilities for maximizing its potential In Enabling Enterprise Transformation Nagy Hanna draws on his rich experience of over 35 years at the World Bank and other aid agencies as a development strategist and ICT policy expert the most current research and best practices from around the world to provide practical tools for promoting economic and social transformation through ICT He assesses various initiatives to develop and diffuse ICT such as innovation funds incubators parks public private partnerships and comprehensive promotion programs He argues for the strategic options now open for developing countries to participate in ICT production to deploy ICT to transform industries and services and to leverage ICT as a new national infrastructure for improving the business environment and enhancing the competitiveness of the whole economy The challenge for leaders in developing countries is to create such social and institutional dynamics for learning about ICT use and adaptation at many levels Lessons gained so far from programs to build these social learning and innovation capabilities at the institutional and grassroots levels should be shared among developing countries and a dialogue among business leaders policymakers development agencies educational institutions and the general citizenry must be advanced **The Global Information Technology Report 2006-2007** A. López-Claros,I. Mia,2007-03-28 Published for the sixth consecutive year The Global Information Technology Report has become the world s most eminent assessment of the impact of information and communication technology ICT on the development and competitiveness of nations as well as a powerful tool for business leaders and policymakers **Challenges**

In The Management Of New Technologies Marianne Horlesberger, Mohamed El-nawawi, Tarek M Khalil, 2007-10-18 New developments in bio and nanotechnologies and also in information and communication technologies have shaped the research environment in the last decade Increasingly highly educated experts in R D departments are collaborating with scientists and researchers at universities and research institutes to develop new technologies Transnational companies that have acquired various firms in different countries need to manage diverse R D strategies and cultures The new knowledge based economy permeates across companies universities research institutes and countries creating a cross disciplinary global environment Clearly managing technology in this new climate presents significant challenges This book comprises selected papers from the 14th International Conference on Management of Technology which was convened under the auspices of IAMOT and UNIDO on 22-26 May 2005 in Vienna Austria It deals with some important aspects of these challenges and discusses in detail the changing dynamics of innovation and technology management It will certainly appeal to academics scientists managers and policy makers alike *Digital Review of Asia Pacific 2009-2010* Shahid Akhtar, 2009-06-03 The biennial Digital Review of Asia Pacific is a comprehensive guide to the state of practice and trends in information and communication technologies for development ICTD in the Asia Pacific region This fourth edition 2009-2010 features 30 economies and four sub regional groupings The chapters provide updated information on ICT infrastructure industries content and services key programs enabling policies and regulation education and capacity building open source and research and development initiatives as well as ICTD challenges in each of the economies covered The common framework that underpins these reports allows readers to undertake a comparative analysis and assess progress across Asia Pacific In addition regional overviews provide a synthesis of ICTD trends regulatory issues and lessons for managing innovation in the network economy The thematic chapters focus on issues in ICT in education a key area in ICTD The authors are drawn from government academe industry and civil society providing a broad perspective on the use of ICTs for human development **Digitalization in Open Economies** Michael Vogelsang, 2010-03-20 Digital strings are not visible but affect all economic segments This book studies the phenomenon of digitalization with the instruments of economics in order to explore the interdependencies between digitalization economic policy and macroeconomic variables of open economies Digitalization is separated into the three components networks IT services and digital goods which are then incorporated into macroeconomic models of trade theory in open economies This approach allows to formally describe the cross effects between digitalization and macroeconomic variables of a country Specifically it is used to analyze interdependencies between macroeconomic variables and networks IT services and digital goods and to determine the challenges of digitalization for economic policy and regulation
