The Knowledge of Nature and the Nature of Knowledge in Early Modern Japan Federico

Marcon, 2015-07-16 From the early seventeenth to the mid nineteenth century Japan saw the creation development and apparent disappearance of the field of natural history or honzogaku Federico Marcon traces the changing views of the natural environment that accompanied its development by surveying the ideas and practices deployed by honzogaku practitioners and by vividly reconstructing the social forces that affected them These include a burgeoning publishing industry increased circulation of ideas and books the spread of literacy processes of institutionalization in schools and academies systems of patronage and networks of cultural circles all of which helped to shape the study of nature In this pioneering social history of knowledge in Japan Marcon shows how scholars developed a sophisticated discipline that was analogous to European natural history but formed independently He also argues that when contacts with Western scholars traders and diplomats intensified in the nineteenth century the previously dominant paradigm of honzogaku slowly succumbed to modern Western natural science not by suppression and substitution as was previously thought but by creative adaptation and transformation

Conservation Biology for All

Navjot S. Sodhi, Paul R. Ehrlich, 2010-01-08 Conservation Biology for All provides cutting edge but basic conservation science to a global readership A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting edge conservation knowledge as widely as possible Important topics such as balancing conservation and human needs climate change conservation planning designing and analyzing conservation research ecosystem services endangered species management extinctions fire habitat loss and invasive species are covered Numerous textboxes describing additional relevant material or case studies are also included The global biodiversity crisis is now unstoppable what can be saved in the developing world will require an educated constituency in both the developing and developed world Habitat loss is particularly acute in developing countries which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found Sadly developing world conservation scientists have found it difficult to access an authoritative textbook which is particularly ironic since it is these

countries where the potential benefits of knowledge application are greatest There is now an urgent need to educate the next generation of scientists in developing countries so that they are in a better position to protect their natural resources

Evolutionary Thinking Across Disciplines Agathe du Crest, Martina Valković, André Ariew, Hugh Desmond, Philippe Huneman, Thomas A. C. Reydon, 2023-06-26 This volume aims to clarify the epistemic potential of applying evolutionary thinking outside biology and provides a survey of the current state of the art in research on relevant topics in the life sciences the philosophy of science and the various areas of evolutionary research outside the life sciences By bringing together chapters by evolutionary biologists systematic biologists philosophers of biology philosophers of social science complex systems modelers psychologists anthropologists economists linguists historians and educators the volume examines evolutionary thinking within and outside the life sciences from a multidisciplinary perspective While the chapters written by biologists and philosophers of science address theoretical aspects of the guiding questions and aims of the volume the chapters written by researchers from the other areas approach them from the perspective of applying evolutionary thinking to non biological phenomena Taken together the chapters in this volume do not only show how evolutionary thinking can be fruitfully applied in various areas of investigation but also highlight numerous open problems unanswered questions and issues on which more clarity is needed As such the volume can serve as a starting point for future research on the application of evolutionary thinking across disciplines

Philosophy and the Mixed Race Experience Tina Fernandes Botts, 2016-01-21 Philosophy and the

Mixed Race Experience is a collection of essays by philosophers about the mixed race experience. Each essay is meant to represent one of three possible things: 1. what the philosopher sees as the philosopher's best work; 2. evidence of the possible impact of the philosopher's mixed race experience on the philosopher's work; or 3. the philosopher's philosophical take on the mixed race experience. The book has two primary goals: 1. to collect together for the first time the work of professional academic philosophers who have had the mixed race experience; and 2. to bring these essays together for the purpose of adding to the conversation on the question of the degree to which factual identity and philosophical work may be related. The book also examines the possible relationship between the mixed race experience and certain philosophical positions. *The Architectonic of Reason* (Lea Ypi, 2021) This book focuses on a question issued from *The Architectonic of Pure Reason*, one of the most important sections of Kant's first Critique: what is the human being? It suggests that the answer to this question is tied to a particular account of the unity of reason, one that stresses its purposive character.

Transformations of Lamarckism (Snait B. Gissis, Eva Jablonka, 2011-04-22) A reappraisal of Lamarckism, its historical impact, and contemporary significance. In 1809, the year of Charles Darwin's birth, Jean Baptiste Lamarck published *Philosophie zoologique*, the first comprehensive and systematic theory of biological evolution. The Lamarckian approach emphasizes the generation of developmental variations. Darwinism stresses selection. Lamarck's ideas were eventually eclipsed by Darwinian concepts, especially after the emergence of the Modern Synthesis in the twentieth century. The different approaches, which can be seen as complementary rather than mutually exclusive, have important implications for the kinds of questions biologists ask and for the type of research they conduct. Lamarckism has been evolving, or in Lamarckian terminology, transforming, since *Philosophie zoologique*'s description of biological processes mediated by subtle fluids. Essays in this book focus on new developments in biology that make Lamarck's ideas relevant not only to modern empirical and theoretical research but also to problems in the philosophy of biology. Contributors discuss the historical transformations of Lamarckism from the 1820s to the 1940s and the different understandings of Lamarck and Lamarckism, the Modern Synthesis, and its emphasis on Mendelian genetics. Theoretical and experimental research on such Lamarckian topics as plasticity, soft epigenetic inheritance, and individuality, and the importance of a developmental approach to evolution in the philosophy of biology. The book shows the advantages of a Lamarckian perspective on evolution. Indeed, the development-oriented approach it presents is becoming central to current evolutionary studies, as can be seen in the burgeoning field of *Evo Devo*. *Transformations of Lamarckism* makes a unique contribution to this research.
