Kidneys are the "filters" of the excretory system. They control essential balance between body salts and water. They remove from the blood nitrogenous wastes, water, urea, nonvolatile foreign substances, excess salt and excess water. The kidney is enclosed by a connective tissue capsule and is divided into an outer cortex and an inner medulla. The Loop of Henle functions chiefly for water resorption. The liquid waste, urine, collected by the kidneys passes through the ureter to the urinary bladder. Urinary bladder is a strong muscular organ that stores the urine until it can be excreted via the urethra.
