The Carbon Buster's Home Energy Handbook Godo Stoyke, 2006-11-01 Most people are unaware that environmental problems such as climate change can be easily avoided at a profit through the intelligent application of appropriate technology. The Carbon Buster's Home Energy Handbook describes how to achieve this goal in the residential field. The first book in North America to provide a detailed carbon accounting of a family's carbon emissions and how to reduce them, it systematically analyzes energy costs and evaluates which measures yield the highest returns for the environment and the pocketbook. It provides answers to questions such as: Which measure is more effective: putting solar panels on your roof or buying a hybrid car? Where do I need to invest first: in high efficiency shower heads or solar tubes? Is a 500 fridge that uses 800 kWh of power per year a good buy? The book allows individuals to quickly and accurately assess which products are a good deal and which aren't. It systematically analyzes residential carbon emissions and energy costs and prioritizes solutions based on highest carbon reductions and monetary returns, yielding results that are often surprising. The book enables readers to dramatically reduce their carbon emissions far below the levels targeted under the Kyoto Protocol. At the same time, readers implementing the recommendations will save an average of 15,000 in energy costs over the next five years. **Ski**

It outlines the effects these models have on efficiency, learning, innovation, and workers' health and offers critical reflections for students. Some of the models covered are Taylorism, bureaucracy, the socio-technical school, process organisation, such as lean production, learning organisations, knowledge management, project organising, including agile, platform economy, professional organisations, new public management, and sustainable organisations. Featuring learning objectives and reflective questions for students of organisation studies and design, this textbook has a pedagogical structure based on the division of work and the coordination of work. Conclusions are presented on contemporary work organisation models, impact on working life, ultimately encouraging students to ask the question: how can we create more sustainable work organisations. **Ski**, 1993-11 **Ski**, 1992-11 *Official Gazette of the United States Patent and Trademark Office*, 2002
