How It All Began Miguel Cisneros, 2020-05-26 How It All Began is based on Miguel Mike Cisneros Jr's life experiences growing up as a child dealing with family conflicts domestic violence bullying and child abuse homelessness and short periods of happiness At times there were moments of hopelessness despair and desperation until he had to make a life

changing commitment to leave all that was negative and begin a new life hoping something positive would come from it That life changing commitment was with the United States Navy From the very beginning upon joining the Navy many in leadership positions seemed to try blocking his desire to move forward including people in leadership positions during a period when the Vietnam War was ending and the military was experiencing racial tension Even though he didn't like it and knew it wasn't right he kept going There were also those in leadership positions that saw the potential in him and provided the mentoring and guidance for him to advance After serving in the Navy for over thirty years through many years of sea duty deployments family separations adversity and at times humiliations he found ways to achieve his goals and succeed At the same time he provides insights of the chain of command and their leadership style As with all organizations there are good leaders and bad leaders and from that he learned and tried emulating the best from each This personal story was written in the hopes that someone may learn from these experiences and perhaps inspire them to believe in themselves to use their abilities to have a positive attitude and most importantly to never give up

Multi-Disciplinary Engineering for Cyber-Physical Production Systems Stefan Biffl, Arndt Lüder, Detlef Gerhard, 2017-05-06 This book discusses challenges and solutions for the required information processing and management within the context of multi disciplinary engineering of production systems The authors consider methods architectures and technologies applicable in use cases according to the viewpoints of product engineering and production system engineering and regarding the triangle of 1 product to be produced by a 2 production process executed on 3 a production system resource With this book industrial production systems engineering researchers will get a better understanding of the challenges and requirements of multi disciplinary engineering that will guide them in future research and development activities Engineers and managers from engineering domains will be able to get a better understanding of the benefits and limitations of applicable methods architectures and technologies for selected use cases IT researchers will be enabled to identify research issues related to the development of new methods architectures and technologies for multi disciplinary engineering pushing forward the current state of the art
