

P. Sci. Waves **Key**

Put all answers on a separate sheet of notebook paper.

- Mechanical waves need a medium through which to transport energy.
- The particles in a surface water wave move in a circle (back-&-forth / up & down).
- Waves in which the particles of medium move at right angles to the direction of the wave are transverse waves.
- The wavelength of a wave is measured from the crest of one wave to the crest of the next.
- If the wavelength of a given wave decreases, you know that its frequency will increase.
- Two waves have the same frequency and wavelength, but the first wave has a greater amplitude. The energy of the first wave greater than that of the second.
- Wave A has a greater frequency than wave B, but the amplitude of the two waves is the same. The energy of wave A is equal to that of wave B.
- The unit for frequency is the hertz.
- A wave will travel only as long as it has energy to carry.
- When you squeeze together the coils of a spring and then release them, you are creating a compressional wave.
- Waves in which the particles of the medium move only in the same direction as the motion of the wave are compressional waves.
- You are creating a wave on a spring. If you start shaking the spring more slowly, the wavelength of the resulting wave will increase.
- If you are lying on a raft, and you notice that the number of waves that go past the raft increases, you also find that the distance between each crest decreases.
- Wave A carries more energy than wave B. Wave B has a smaller amplitude than wave A.
- The energy a wave carries is measured by its amplitude.
- For a given wave, if the frequency doubles, the wavelength is halved.
- When a wave passes from a less dense medium to a more dense medium, the speed may change.
- Repeating disturbances that transfer energy through matter or space are waves.

- The two types of mechanical waves are transverse and compressional (longitudinal).
- If the frequency of a water wave changes, its wavelength must also change.
- The symbol λ (lambda) stands for the wavelength.

Figure 11-1

- In Figure 11-1, identify the following structures:
B wavelength, A crest, C amplitude
- Speed can be determined by dividing the distance traveled by the time. The water waves in a lake travel 4.4 m in 2.0 s. What is the speed of the waves? $y = d/t$ $v = 4.4\text{m} / 2.0\text{s}$ $v = 2.2\text{ m/s}$
- An ocean wave has a frequency of 2.0 Hz with a wavelength of 10 m. What is the velocity of the wave? $v = f \times \lambda$ $v = 2.0\text{ Hz} \times 10\text{ m}$
 $v = 20\text{ m/s}$

- The wavelength of the wave in the diagram is 1.5 m.
- The amplitude of the above wave is 0.5 m.
- A man is standing on the shore of a beach, up to his knees in water. Every 5 seconds a wave breaks on him. What is the period of the wave? 5 seconds

Sound Design Theory and Practice Leo Murray, 2019-05-22 *Sound Design Theory and Practice* is a comprehensive and accessible guide to the concepts which underpin the creative decisions that inform the creation of sound design. A fundamental problem facing anyone wishing to practice, study, teach or research about sound is the lack of a theoretical language to describe the way sound is used and a comprehensive and rigorous overarching framework that describes all forms of sound. With the recent growth of interest in sound studies, there is an urgent need to provide scholarly resources that can be used to inform both the practice and analysis of sound. Using a range of examples from classic and contemporary cinema, television and games, this book provides a thorough theoretical foundation for the artistic practice of sound design, which is too frequently seen as a technical or secondary part of the production process. Engaging with practices in film, television and other digital media, *Sound Design Theory and Practice* provides a set of tools for systematic analysis of sound for both practitioners and scholars.

Sound, Media, Ecology Milena Droumeva, Randolph Jordan, 2019-06-27 This volume reads the global urban environment through mediated sonic practices to put a contemporary spin on acoustic ecology's investigations at the intersection of space, cultures, technology and the senses. Acoustic ecology is an interdisciplinary framework from the 1970s for documenting, analyzing and transforming sonic environments; an early model of the cross boundary thinking and multi modal practices now common across the digital humanities. With the recent emergence of sound studies and the expansion of ecological thinking, there is an increased urgency to re-discover and contemporize the acoustic ecology tradition. This book serves as a comprehensive investigation into the ways in which current scholars working with sound are re-inventing acoustic ecology across diverse fields, drawing on acoustic ecology's focus on sensory experience, place and applied research as well as attendance to mediatized practices in sounded space. From sounding out the Anthropocene to rethinking our auditory media landscapes to exploring citizenship and community, this volume brings the original acoustic ecology problem set into the contemporary landscape of sound studies.

The Sound Handbook Tim Crook, 2013-06-17 Tim Crook has written an important and much needed book and its arrival on our shelves has come at a highly appropriate time. Professor Sen Street, Bournemouth University. *The Sound Handbook* maps theoretical and practical connections between the creation and study of sound across the multi media spectrum of film, radio, music, sound art, websites, animation and computer games, entertainment and stage theatre. Using an interdisciplinary approach, Tim Crook explores the technologies, philosophies and cultural issues involved in making and experiencing sound, investigating soundscape debates and providing both intellectual and creative production information. The book covers the history, theory and practice of sound and includes practical production projects and a glossary of key terms. *The Sound Handbook* is supported by a companion website signposted throughout the book with further practical and theoretical resources dedicated to bridging the creation and study of sound across professional

way to the investigation phase as soon as a suspicion that a criminal offence has been committed arises Initially one of the main arguments in favour of the distinction seems to have been that a citizen's obligation to provide information to the supervising authorities conflicts with a suspect's right to remain silent during the investigation phase Therefore the central question of this study is whether it is necessary to have a strict demarcation between administrative supervision and criminal investigation in order to better respect the nemo tenetur principle **Dwight's Journal of Music** John Sullivan
