The Green Guide 2008:

Green Guide Families Catherine Zandonella, 2010 Offers information on how to make environmentally sound decisions about food health clothing toys and activities with information on topics ranging from lead painted toys to the potential side effects of plastic bottles , **Low Impact Building** Tom Woolley, 2013-01-22 This guide to the designs technologies and materials that really make green buildings work will help architects specifiers and clients make informed choices based on reliable technical information Low Impact Building Housing using Renewable Materials is about changing the way we build houses to reduce their carbon footprint and to minimise environmental damage One of the ways this can be done is by reducing the energy and environmental impact of the materials and resources used to construct buildings by choosing alternative products and systems In particular we need to recognise the potential for using natural and renewable construction materials as a way to reduce both carbon emissions but also build in a more benign and healthy way This book is an account of some attempts to introduce this into mainstream house construction and the problems and obstacles that need to be overcome to gain wider acceptance of genuinely environmental construction methods The book explores the nature of renewable materials in depth where do they come from what are they made of and how do they get into the construction supply chain The difference between artisan and self build materials like earth and straw and more highly processed and manufactured products such as wood fibre insulation boards is explored The author then gives an account of the Renewable House Programme in the UK explaining how it came about and how it was funded and managed by Government agencies He analyses 12 case studies of projects from the Programme setting out the design and methods of construction buildability environmental assessment tools used in the design performance in terms of energy air tightness carbon footprint and post occupancy issues The policy context of energy and sustainability in the UK Europe and the rest of the world is subjected to a critical examination to show how this affects the use of natural and renewable materials in the market for insulation and other construction materials The debate over energy usage and embodied energy is discussed as this is central to the reason why even many environmentally progressive people ignore the case for natural and renewable materials The book offers a discussion of building physics and science considering energy performance moisture durability health and similar issues A critical evaluation of assessment accreditation and labelling of materials and green buildings is central to this as well as a review of some of the key research in the field **New Aspects of Quantity Surveying Practice** Duncan Cartlidge, 2011-04-25 In the 1990s many pundits said that Quantity Surveyors were going the way of the dodo a prophecy which has proven to be far from accurate In response Duncan Cartlidge wrote the first edition of this book to address the changing role of the QS in the twenty first century As we enter the second decade of the twenty first century the pressure on the QS profession continue to change and evolve and so this third edition includes new chapters to help students and professionals deal with the new issues they face Key areas for new coverage include the RICS New Rules of

Measurement NRM the increasing importance of sustainability in the built environment new pressures for ethical standards in the QS profession Alongside these new issues the chapters addressing issues such as procurement IT global markets and adding value have been updated to reflect changes in practice since the second edition With an emphasis on current practice you will find this book an indispensable guide as you embark on your career in quantity surveying

Making the Most of the Water We Have David B. Brooks,Oliver M. Brandes,Stephen Gurman,2009 Based on the soft path approach to the energy sector a transition is now under way to a soft path for water This approach starts by ensuring that ecosystem needs for water are satisfied and then undertakes a radical approach to reducing human uses of water by economic and social incentives including open decision making water markets and equitable pricing and the application of super efficient technology all applied in ways that avoid jeopardizing quality of life The soft path for water is therefore a management strategy that frees up water by curbing water waste This book is the first to present and apply the water soft path approach It has three aims to bring to a wider audience the concept and the potential of water soft paths to demonstrate that soft path analysis is analytical and practical and not just eco dreaming and to indicate that soft paths are not only conceptually attractive but that they can be made economically and politically feasible Includes a tool kit for planners and other practitioners Published with POLIS Project and Friends of the Earth
