Subcortical Structures and Cognition

Leonard F. Koziol, Deborah Ely Budding, 2009-04-21 Clinical psychologists and neuropsychologists are traditionally taught that cognition is mediated by the cortex and that subcortical brain regions mediate the coordination of movement However this argument can easily be challenged based upon the anatomic organization of the brain The relationship between the prefrontal cortex frontal lobes and basal ganglia is characterized by loops from these anterior brain regions to the striatum the globus pallidus and the thalamus and then back to the frontal cortex There is also a cerebrocerebellar system defined by projections from the cerebral cortex to the pontine nuclei to the cerebellar cortex and deep cerebellar nuclei to the red nucleus and then back to thalamus and cerebral cortex including all regions of the frontal lobes Therefore both the cortical striatal and cortical cerebellar projections are anatomically defined as re entrant systems that are obviously in a position to influence not only motor behavior but also cognition and affect This represents overwhelming evidence based upon neuroanatomy alone that subcortical regions play a role in cognition The first half of this book defines the functional neuroanatomy of cortical subcortical circuitries and establishes that since structure is related to function what the basal ganglia and cerebellum do for movement they also do for cognition and emotion The second half of the book examines neuropsychological assessment Patients with lesions restricted to the cerebellum and or basal ganglia have been described as exhibiting a variety of cognitive deficits on neuropsychological tests Numerous investigations have demonstrated that higher level cognitive functions such as attention executive functioning language visuospatial processing and learning and memory are affected by subcortical pathologies There is also considerable evidence that the basal ganglia and cerebellum play a critical role in the regulation of affect and emotion These brain regions are an integral part of the brain s executive system The ability to apply new methodologies clinically is essential in the evaluation of disorders with subcortical pathology including various developmental disorders broadly defined to include learning disorders and certain psychiatric conditions for the purpose of gaining greater understanding of these conditions and developing appropriate methodologies for treatment The book is organized around three sources of evidence neuroanatomical connections patients with various disease processes experimental studies including various imaging techniques These three sources of data present compelling evidence that the basal ganglia and cerebellum are involved in cognition affect and emotion The question is no longer if these subcortical regions are involved in these processes but instead how they are involved The book is also organized around two basic concepts 1 the functional neuroanatomy of the basal ganglia and the cerebellum and 2 how this relates to behavior and neuropsychological testing Cognitive neuroscience is entering a new era as we recognize the roles of subcortical structures

in the modulation of cognition The fields of neuropsychology cognitive psychology neuropsychiatry and neurology are all developing in the direction of understanding the roles of subcortical structures in behavior This book is informative while defining the need and direction for new paradigms and methodologies for neuropsychological assessment ADHD as a Model of Brain-Behavior Relationships Leonard F. Koziol, Deborah Ely Budding, Dana Chidekel, 2013-09-24 ADHD as a Model of Brain Behavior Relationships Leonard F Koziol Deborah Ely Budding and Dana Chidekel Series Title Springer Briefs in Neuroscience Subseries The Vertically Organized Brain in Theory and Practice It s been a basic neurological given the brain does our thinking and has evolved to do the thinking as controlled by the neocortex In this schema all dysfunction can be traced to problems in the brain s lateral interactions But in scientific reality is this really true Challenging this traditional cortico centric view is a body of research emphasizing the role of the structures that control movement the brain s vertical organization in behavioral symptoms Using a well known widely studied disorder as a test case ADHD as a Model of Brain Behavior Relationships offers an innovative framework for integrating neuroscience and behavioral research to refine diagnostic process and advance the understanding of disorders Identifying a profound disconnect between current neuropsychological testing and the way the brain actually functions this revision of the paradigm critiques the DSM and ICD in terms of the connectedness of brain structures regarding cognition and behavior The authors argue for a large scale brain network approach to pathology instead of the localizing that is so common historically and for an alternate set of diagnostic criteria proposed by the NIMH Included in the coverage The diagnosis of ADHD history and context ADHD and neuropsychological nomenclature Research Domain Criteria a dimensional approach to evaluating disorder The development of motor skills executive function and a relation to ADHD The role of the cerebellum in cognition emotion motivation and dysfunction How large scale brain networks interact Heralding a more accurate future of assessment diagnosis and treatment of neurodevelopmental disorders ADHD as a Model of Brain Behavior Relationships represents a major step forward for neuropsychologists child psychologists and psychiatrists or any related profession interested in a neuroscientific understanding of brain function **Music, Brain, and Rehabilitation: Emerging Therapeutic Applications and**

Potential Neural Mechanisms Teppo Särkämö, Eckart Altenmüller, Antoni Rodríguez-Fornells, Isabelle Peretz, 2016-08-05 Music is an important source of enjoyment learning and well being in life as well as a rich powerful and versatile stimulus for the brain With the advance of modern neuroimaging techniques during the past decades we are now beginning to understand better what goes on in the healthy brain when we hear play think and feel music and how the structure and function of the brain can change as a result of musical training and expertise For more than a century music has also been studied in the field of neurology where the focus has mostly been on musical deficits and symptoms caused by neurological illness e g amusia musicogenic epilepsy or on occupational diseases of professional musicians e g focal dystonia hearing loss Recently however there has been increasing interest and progress also in adopting music as a therapeutic tool in neurological

rehabilitation and many novel music based rehabilitation methods have been developed to facilitate motor cognitive emotional and social functioning of infants children and adults suffering from a debilitating neurological illness or disorder Traditionally the fields of music neuroscience and music therapy have progressed rather independently but they are now beginning to integrate and merge in clinical neurology providing novel and important information about how music is processed in the damaged or abnormal brain how structural and functional recovery of the brain can be enhanced by music based rehabilitation methods and what neural mechanisms underlie the therapeutic effects of music Ideally this information can be used to better understand how and why music works in rehabilitation and to develop more effective music based applications that can be targeted and tailored towards individual rehabilitation needs The aim of this Research Topic is to bring together research across multiple disciplines with a special focus on music brain and neurological rehabilitation We encourage researchers working in the field to submit a paper presenting either original empirical research novel theoretical or conceptual perspectives a review or methodological advances related to following two core topics 1 how are musical skills and attributes e g perceiving music experiencing music emotionally playing or singing affected by a developmental or acquired neurological illness or disorder for example stroke aphasia brain injury Alzheimer s disease Parkinson s disease autism ADHD dyslexia focal dystonia or tinnitus and 2 what is the applicability effectiveness and mechanisms of music based rehabilitation methods for persons with a neurological illness or disorder Research methodology can include behavioural physiological and or neuroimaging techniques and studies can be either clinical group studies or case studies studies of healthy subjects are applicable only if their findings have clear clinical implications Klinická neuropsychologie v praxi
