Technical Data | Clarifier with self-cleaning bowl

This centrifuge has been designed for the clarification of beverages. With the patented Westfalia Separator® hydrostop bowl ejection system, this machine is suitable particularly for applications where the prime target is high yield. High solid contents likewise present no problem. The feed and discharge are in a closed system. The hydrohermetic feed ensures gentle treatment of the product. The centrifugal pump in the discharge generates

adequate pressure to convey the product, for example, into the storage tank. The feed and discharge are rated to suit the respective application.

The bowl is driven via the so-called "short spindle drive" which reliably ensures low-vibration running. The machine is driven by a 3-phase AC motor via a low-maintenance flat belt. Frequency converters are used to optimize the power consumption and avoid current peaks.

All product-contacting parts are made of stainless steel; the gaskets conform to the requirements of food operations. The separator has been designed in accordance with the "hygienic design" guidelines.

Biotechnology Karl Schügerl, 2013-03-09 Solvent Extraction in Biotechnology deals with the recovery and purification of primary and secondary metabolites by solvent extraction. In the first part, the reaction engineering principles, definitions, thermodynamic fundamentals, and system models, the kinetics of mass transfer between two phases without and with chemical reaction, as well as extraction equipment, which are important for downstream processing in biotechnology, are considered in detail. The special part of the book describes the recovery of low molecular metabolites, alcohols, acids, and antibiotics with organic solvents, carrier modifier solvent systems, supercritical gases, as well as with liquid membrane techniques. Several practical examples are given for the recovery of different metabolites, as well as for the calculation of the extraction processes necessary for equipment design. Besides solvent extraction, novel separation techniques with liquid membrane, microemulsion, and reversed micelles are also presented. This book will introduce the biochemical engineer and process engineer to the recovery of products from complex cultivation broths by modern techniques of solvent extraction and help them with process design.

Fats and Oils Handbook (Nahrungsfette und Öle) Michael Bockisch, 2015-08-13 Fats and Oils Handbook. Nahrungsfette und Öle acknowledges the importance of fats and oils and surveys today's state of the art technology. To pursue food technology without knowing the raw material would mean working in a vacuum. This book describes the raw materials predominantly employed and the spectrum of processes used today. It is the updated and revised English version of *Nahrungsfette und Öle*, originally printed in German. It contains 283 tables, 647 figures, and over 850 references. If you can afford only one book on oils and fats, their composition, processing, and use, then this should probably be the one. Presents details on the composition, chemistry, and processes of the major fats and oils used today. Includes hundreds of illustrations and tables making the concepts easier to read and grasp. Acknowledges the importance of fats and oils, offers details on relevant technologies.
