Molecular Dynamics Simulation of Nanocomposites using BIOVIA Materials Studio, Lammmps and Gromacs Sumit Sharma,2025-04-10 Molecular Dynamics Simulation of Nanocomposites using BIOVIA Materials

Studio LAMMPS and GROMACS Second Edition introduces the three major software packages essential for the molecular dynamics simulation of nanocomposites providing detailed instructions on utilizing each. This content is accompanied by real world examples that illustrate when each should be applied. Numerous case studies demonstrate how each software package predicts various properties of nanocomposites encompassing metal matrix, polymer matrix and ceramic matrix based nanocomposites. Explored properties include mechanical, thermal, optical and electrical characteristics. This is a valuable resource for students, researchers and scientists working in the field of molecular dynamics simulation. All chapters have been fully updated to reflect the latest developments in the field and this new edition has been enriched with additional chapters covering AI composites, machine learning, polymer coatings and graphene based materials and carbon nanotubes. Provides a detailed explanation on the basic commands and modules of Materials Studio, LAMMPS and GROMACS. Demonstrates how these materials predict the mechanical, thermal, electrical and optical properties of nanocomposites. Introduces coding in LAMMPS explaining modeling using Materials Studio and LAMMPS. Utilizes case studies to illustrate the appropriate software for solving various nanoscale modeling problems.

Molecular Dynamics Simulations of Disordered Materials Carlo Massobrio, Jincheng Du, Marco Bernasconi, Philip S. Salmon, 2015-04-22. This book is a unique reference work in the area of atomic scale simulation of glasses. For the first time a highly selected panel of about 20 researchers provides in a single book their views, methodologies and applications on the use of molecular dynamics as a tool to describe glassy materials. The book covers a wide range of systems covering traditional network glasses such as chalcogenides and oxides as well as glasses for applications in the area of phase change materials. The novelty of this work is the interplay between molecular dynamics methods both at the classical and first principles level and the structure of materials for which quite often direct experimental structural information is rather scarce or absent. The book features specific examples of how quite subtle features of the structure of glasses can be unraveled by relying on the predictive power of molecular dynamics used in connection with a realistic description of forces.
