important element of this change is related to global climate modification Can the study of climate and history help in devising strategies for coping with this change What might be the type of information most useful in this context What are the pitfalls awaiting the unwary These are the kinds of questions that led us to bring together experts from the natural and social sciences with a strong interest in history to promote discussion between workers in different disciplines by focussing on a common topic of great interest to society The meeting was arranged in the framework of a Hanse Conference within the interdisciplinary program of the Hanse Wissenschaftskolleg a foundation set up to promote interdisciplinary studies in collaboration between the universities of Bremen and Oldenburg The aim of the Hanse Conferences in general is to provide opportunities for experts from different fields of the sciences and humanities to come together and explore the larger framework of topics of common interest What unites the participants is their desire to look over the fence to neighboring disciplines Young colleagues who wish to build an interdisciplinary career are particularly welcome In the Hanse Conference on Climate and History we have endeavoured to build bridges between the climate sciences and the sociological sciences concerned with environmental impacts on human activities The geological sciences we felt are especially well suited to the purpose because they already comprise historical aspects

Becking, 2021-10-04 How should one write a history of Ancient Israel In the last few decades a lively discussion has taken place on the historiography of ancient Israel Minimalists such as Philip Davies Thomas Thompson and Niels Peter Lemche challenged the usefulness of the Hebrew Bible as a source for constructing Israel s past Maximalists like Baruch Halpern and William Dever argued instead that the data from the Hebrew Bible should be trusted until otherwise proven Others among whom we can name Hans Barstad Rainer Albertz and Lester Grabbe took a third road The essays in this volume follow that third road by applying insights from the field of philosophy of history A dozen case studies from David to the earliest Samaritans demonstrate how difficult it is to write a history of ancient Israel without falling in the abyss of an ideology in one direction or another The matrix designed by Manfred Weippert to look at the past through five windows landscape climate archaeology epigraphy and only at the end the Hebrew Bible turned out to be more helpful The conclusion of this research is that there are some stable pillars in the swamp of the past but it comes with the warning that the space between these pillars is large and cannot easily be filled **New Energies** Stephen G. Gross, Andrew Needham, 2023-02-28 Over the past 250

years energy transitions have occurred repeatedly the rise of coal in the nineteenth century the explosion of oil in the twentieth century the nuclear utopianism of the 1950s and 1960s These transitions have been as revolutionary as any political or economic upheaval and they required changes in infrastructure and behavior Yet new energies never wholly replace old ones This volume historicizes energy production and consumption while demonstrating how energy use has reshaped everything from social life and economic organization to political governance It foregrounds the importance of energy for big historical questions about capitalism democracy inequality the environment and identity and it argues that energy systems themselves merit attention as key agents of historical change Given the urgency of climate change and the central position that energy plays in causing and potentially solving global warming this volume engages history as a discipline in the debate over what may be most monumental energy transition of all time the shift away from fossil fuels

Celsius Ian Baucom, 2020-07-24 In *History 4 Celsius* Ian Baucom continues his inquiries into the place of the Black Atlantic in the making of the modern and postmodern world Putting black studies into conversation with climate change Baucom outlines how the ongoing concerns of critical race diaspora and postcolonial studies are crucial to understanding the Anthropocene He draws on materialist and postmaterialist thought Sartre and the science of climate change to trace the ways in which evolving political cultural and natural history converge to shape a globally destructive force Identifying the quest for limitless financial gain as the primary driving force behind both the slave trade and the continuing increase in global greenhouse gas emissions Baucom demonstrates that climate change and the conditions of the Black Atlantic colonialism and the postcolony are fundamentally entwined In so doing he argues for the necessity of establishing a method of critical exchange between climate science black studies and the surrounding theoretical inquiries of humanism and posthumanism *The Shortest History of France* Colin Jones, 2025-04-15 A global history of the world's most visited country from Caesar's Gallic Wars to current political crisis *The Shortest History* books deliver thousands of years of history in one riveting fast paced read France has long been feted for its unsurpassed cultural and historical riches Gothic architecture Louis XIV opulence revolutionary spirit café society what could be more quintessentially French Rarely do we think of France

as a melting pot and yet historian Colin Jones asserts it is no less a mélange of foreign ingredients than the United States and by some measures more so. The Shortest History of France reveals a nation whose politics and society have always been shaped by global forces. With up to date scholarship that avoids the traps of national exceptionalism Jones reminds us that it was only after the first millennium of French history after constant subjugation to the Roman Empire and Germanic tribal forces that a nation state began to emerge while absorbing influences from its European neighbors. Later the Crusades and subsequent overseas colonization paved the way for cultural exchange with Africa the Caribbean East Asia and elsewhere France has been home to the Enlightenment the Universal Declaration of Human Rights and the Paris Agreement but also to the Vichy regime the Algerian War and persistent racism and civil unrest. By turns serious and spirited The Shortest History of France is a dynamic global story for our times. The Shortest History books deliver thousands of years of history in one riveting fast paced read.
