Kidwell, Stefan Skrimshire, 2024-01-02 Human caused extinctions have never been so prominent in our political and cultural landscape Extinction and Religion is a collection of wide ranging chapters that explore the implications for religious faith and experience as it relates to a sixth mass extinction in Earth s history Further it seeks to answer the question as to how religious and spiritual practices are

shaping responses to the crisis Edited by Jeremy H Kidwell and Stefan Skrimshire this collection aims to set a new postsecular agenda articulating the questions challenges and ways forward for thinking about religion in an age of mass extinction rather than provide responses from world religions in isolation It covers subjects such as the multitude of challenges posed by mass extinction to beliefs about the future of humanity death and the afterlife the integrity of creation and the relationship between human and nonhuman life Wide ranging and incisive Extinction and Religion amply demonstrates the many ways in which the threat of extinction profoundly affects our faith and religious life worlds The Alphas Liam Parks,2014-09-01 At the dawn of the fourth millennium human civilization is at its height technology has enabled the conquest of many solar systems in the galaxy wars have ceased and men respect the diversity of choices and beliefs of their peers But our civilization led by one global company the FuturaTech has developed on secrets known only to the government s elite While digging deeper into the past Valentia and Maxoa will unveil mysteries much bigger than they anticipated and learn the truth about their origins But this truth will have consequences they did not grasp *Marvyn Scudder Manual of Extinct Or Obsolete Companies* ,1926 **Issues in Astronomy and Astrophysics: 2011 Edition** ,2012-01-09 Issues in Astronomy and Astrophysics 2011 Edition is a ScholarlyEditions eBook that delivers timely authoritative and comprehensive information about Astronomy and Astrophysics The editors have built Issues in Astronomy and Astrophysics 2011 Edition on the vast information databases of ScholarlyNews You can expect the information about Astronomy and Astrophysics in this eBook to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of Issues in Astronomy and Astrophysics 2011 Edition has been produced by the world s leading scientists engineers analysts research institutions and companies All of the content is from peer reviewed sources and all of it is written assembled and edited by the editors at ScholarlyEditions and available exclusively from us You now have a source you can cite with authority confidence and credibility More information is available at <http://www.ScholarlyEditions.com> Alpha-, Beta- and Gamma-Ray Spectroscopy K. Siegbahn,2012-12-02 Alpha Beta and Gamma Ray Spectroscopy Volume 1 offers a comprehensive account of radioactivity and related low energy phenomena It summarizes progress in the field of alpha beta and gamma ray spectroscopy including the discovery of the non conservation of parity as well as new experimental methods that elucidate the processes of weak interactions in general and beta decay in particular Comprised of 14 chapters the book presents experimental methods and theoretical discussions and calculations to maintain the link between experiment and theory It begins with a discussion of the interaction of electrons and alpha particles with matter The book explains the elastic scattering of electrons by atomic nuclei and the interaction between gamma radiation and matter It then introduces topic on beta ray spectrometer theory and design and crystal diffraction spectroscopy of nuclear gamma rays Moreover the book discusses the applications of the scintillation counter proportional counting in gases and the general processes and procedures used in determining disintegration schemes

through a study of the beta and gamma rays emitted In addition it covers the nuclear shell model collective nuclear motion and the unified model and alpha decay conservation laws The emissions of gamma radiation during charged particle bombardment and from fission fragments as well as the neutron capture radiation spectroscopy are also explained Experimentalists will find this book extremely useful

Henry Smith Warleigh,1873 **Catastrophic Thinking** David Sepkoski,2020-09-24 A history of scientific ideas about extinction that explains why we learned to value diversity as a precious resource at the same time as we learned to think catastrophically about extinction We live in an age in which we are repeatedly reminded by scientists by the media by popular culture of the looming threat of mass extinction We re told that human activity is currently producing a sixth mass extinction perhaps of even greater magnitude than the five previous geological catastrophes that drastically altered life on Earth Indeed there is a very real concern that the human species may itself be poised to go the way of the dinosaurs victims of the most recent mass extinction some 65 million years ago How we interpret the causes and consequences of extinction and their ensuing moral imperatives is deeply embedded in the cultural values of any given historical moment And as David Sepkoski reveals the history of scientific ideas about extinction over the past two hundred years as both a past and a current process is implicated in major changes in the way Western society has approached biological and cultural diversity It seems self evident to most of us that diverse ecosystems and societies are intrinsically valuable but the current fascination with diversity is a relatively recent phenomenon In fact the way we value diversity depends crucially on our sense that it is precarious that it is something actively threatened and that its loss could have profound consequences In *Catastrophic Thinking* Sepkoski uncovers how and why we learned to value diversity as a precious resource at the same time as we learned to think catastrophically about extinction Fundamental Properties of the Human Nervous System V.

Nebylitsyn,2013-03-08 Although today differential psychology embraces a large and ever increasing body of facts conclusions and practical recommendations which have wide applicability a number of critical problems are still unresolved or only partly resolved One of the most important of these is the relationship between individual variations in human behavior and in individual features of a range of correlated physiological functions Adequate concepts exist for understanding individual variations in some physiological functions underlying specific aspects speed tempo rhythm amplitude of the flow of psychical activity This fact alone is of considerable importance especially when we consider that such dynamic features can and sometimes do in a fundamental way modulate psychological functioning If we consider in addition that in certain circumstances these variables have a direct and sometimes decisive effect on the final behavioral outcome it seems obvious

that the parameters of physiologically active systems determine a number of important features of complex human behavior According to Pavlov the most important of these is that system comprising central nervous system properties which determine the generation of excitatory and inhibitory processes in the structures of the central nervous system The concept of basic nervous system properties as leading parameters of the psychophysiological organization of individuality seems to be one of the outstanding achievements of the Pavlovian school It provided the framework within which investigators could attempt to determine experimentally individual features of behavior and reactivity

The Alpha Vampire Master Tatum Whispers, This is the book 2 of The Alpha Vampire Master Who are you Sebastian I think I can ask the same Where did you come from Anastasia As soon as the last syllable escapes my lips we find ourselves interlocked in a kiss Knowing my full attention I stop to ask Are you sure you want to do this Anastasia The only thing I m sure of is the way you are making me feel Unable to contain me I pull her into a fiery and passionate kiss All my thoughts are obliterated For the first time in over two hundred years I am kissing a mortal woman I can feel the hunger grow inside me the pleasure building towards a peak I pull her even tighter into my body I can smell her arousal and it only fuels me The kiss is getting deeper and deeper with every breath that we take What are we doing Sebastian Anastasia let me show you Vampire Master Sebastian Belmont has been carved to perfection for over two hundred years Drawn to danger he dangles his fingers in all that is supernatural and has great power beyond compare Ruthless yet charming he rules his empire with an iron fist With a line of scorned ex lovers left behind this charming Vampire is set to cross paths with Anastasia Santi Anastasia Santi is a young girl that has great aspirations and desires all the things the love and the fulfillment that she dreamed of as a child She is strong willed and always finds herself in trouble she needs to save from Though one fateful night Sebastian crosses the line and sets his life in a new direction A destiny toward a great legacy and to all things that goes bump in the night But the ultimate sacrifice lies at the end Will Sebastian give up his immortality

Taphonomy Peter A. Allison,David J. Bottjer,2010-11-03 Taphonomic bias is a pervasive feature of the fossil record A pressing concern however is the extent to which taphonomic processes have varied through the ages It is one thing to work with a biased data set and quite another to work with a bias that has changed with time This book includes work from both new and established researchers who are using laboratory field and data base techniques to characterise and quantify the temporal and spatial variation in taphonomic bias It may not provide all the answers but it will at least shed light on the right questions

Individual-based Modeling and Ecology Volker Grimm,Steven F. Railsback,2013-11-28 Individual based models are an exciting and widely used new tool for ecology These

computational models allow scientists to explore the mechanisms through which population and ecosystem ecology arises from how individuals interact with each other and their environment This book provides the first in depth treatment of individual based modeling and its use to develop theoretical understanding of how ecological systems work an approach the authors call individual based ecology Grimm and Railsback start with a general primer on modeling how to design models that are as simple as possible while still allowing specific problems to be solved and how to move efficiently through a cycle of pattern oriented model design implementation and analysis Next they address the problems of theory and conceptual framework for individual based ecology What is theory That is how do we develop reusable models of how system dynamics arise from characteristics of individuals What conceptual framework do we use when the classical differential equation framework no longer applies An extensive review illustrates the ecological problems that have been addressed with individual based models The authors then identify how the mechanics of building and using individual based models differ from those of traditional science and provide guidance on formulating programming and analyzing models This book will be helpful to ecologists interested in modeling and to other scientists interested in agent based modeling
