The In-System Configuration Handbook: Neil G. Jacobson, 2012-12-06 Programmable logic radically changed the electronic system design landscape It reduced board space needed for random logic state machines and system interfaces It allowed faster design cycles made easy late term bug fixes and gave designers greater freedom to experiment and prototype In system programming of these devices has had a similar revolutionary effect The ability to change the programmed content of programmable logic while it is on the board is equivalent to being able to redesign all the hardware without changing a single component This allows the possibility of providing field upgrades of your product to fix problems or to introduce new functionality It allows designing in reconfiguration as an essential function of your system with different capabilities swapped in as needed during run time Further it allows storage of different product profiles for retrieval as necessary to allow just in time configuration of systems to meet market needs Recent developments in programmable logic have helped in making realizing reconfigurable systems more streamlined The most significant development though was the introduction approval and popularization of IEEE STD 1532 the IEEE Standard for In System Configuration of Programmable Devices The purpose of this text is to bring together in a single volume the information needed by systems designers to develop applications that include configurability This covers the entire range of systems from the The In System Configuration Handbook simplest implementations that merely include configurable logic to realize system functions to the most complicated that include reconfigurability as part of the application itself

Handbook Stuart Sutherland, 2006-04-18 by Maq Mannan President and CEO DSM Technologies Chairman of the IEEE 1364 Verilog Standards Group Past Chairman of Open Verilog International One of the major strengths of the Verilog language is the Programming Language Interface PLI which allows users and Verilog application developers to infinitely extend the capabilities of the Verilog language and the Verilog simulator In fact the overwhelming success of the Verilog language can be partly attributed to the existence of its PLI Using the PLI add on products such as graphical waveform displays or pre and post simulation analysis tools can be easily developed These products can then be used with any Verilog simulator that supports the Verilog PLI This ability to create third party add on products for Verilog simulators has created new markets and provided the Verilog user base with multiple sources of software tools Hardware design engineers can and should use the Verilog PLI to customize their Verilog simulation environment A Company that designs graphics chips for example may wish to see the simulation results of a new design in some custom graphical display The Verilog PLI makes it possible and even trivial to integrate custom software such as a graphical display program into a Verilog simulator The simulation results can then dynamically be displayed in the custom format during simulation And if the company uses Verilog simulators from multiple simulator vendors this integrated graphical display will work with all the simulators **Kent's Mechanical Engineers'**
