Newmyer,2016-12-01 Ancient Greeks endeavored to define the human being vis

vis other animal species by isolating capacities and endowments which they considered to be unique to humans This approach toward defining the human being still appears with surprising frequency in modern philosophical treatises in modern animal behavioral studies and in animal rights literature to argue both for and against the position that human beings are special and unique because of one or another attribute or skill that they are believed to possess Some of the claims of man s unique endowments have in recent years become the subject of intensive investigation by cognitive ethologists carried out in non laboratory contexts The debate is as lively now as in classical times and what is of particular note the examples and methods of argumentation used to prove one or another position on any issue relating to the unique status of human beings that one encounters in contemporary philosophical or ethological literature frequently recall ancient precedents This is the first book length study of the man alone of animals topos in classical literature not restricting its analysis to Greco Roman claims of man s intellectual uniqueness but including classical assertions of man s physiological and emotional uniqueness It supplements this analysis of ancient manifestations with an examination of how the commonplace survives and has been restated transformed and extended in contemporary ethological literature and in the literature of the animal rights and animal welfare movements Author Stephen T Newmyer demonstrates that the anthropocentrism detected in Greek applications of the man alone of animals topos is not only alive and well in many facets of the current debate on human animal relations but that combating its negative effects is a stated aim of some modern philosophers and activists

Commentary on De Grammatico Desmond Paul Henry, 2012-12-06 The intent of the present work is chiefly the presentation of a running commentary preponderantly historical in complexion on the detail of the text of St Anselm s dialogue De Grammatico At the same time the making intelligible of that text has demanded the concurrent proffering of logical elucidations The framework adopted for the latter is the Ontology of S Lesniewski The unsuitability of other current systems of logic for the analysis of medieval doctrines has been suggested in HLM I Hereunder the line of analyses proposed in HDG an introductory study of De Grammatico will for the most part be maintained with only a few modifications Changes which further study might demand would in any case involve not so much an abrogation of the HDG versions but rather certain complications of detail on the lines indicated in HLM HEE and Hoi Readers who happen to be out of sympathy either with modern logic as a whole or with the Lesniewskian systems in particular may be assured that the historical thread of the commentary remains for the most part unaffected by issues connected with such logics Much of the historical material contained in the commentary consists of quotations from the logical works of Boethius Some of that material may at first sight appear prosaic and tedious

Schmaltz,2017-06-29 The ancient topic of universals was central to scholastic philosophy which raised the question of whether universals exist as Platonic forms as instantiated Aristotelian forms as concepts abstracted from singular things or as words that have universal signification It might be thought that this question lost its importance after the decline of scholasticism in the modern period However the fourteen contributions contained in The Problem of Universals in Early Modern Philosophy indicate that the issue of universals retained its vitality in modern philosophy Modern philosophers in fact were interested in 3 sets of issues concerning universals i issues concerning the ontological status of universals ii issues

concerning the psychology of the formation of universal concepts or terms and iii issues concerning the value and use of universal concepts or terms in the acquisition of knowledge Chapters in this volume consider the various forms of Platonism conceptualism and nominalism and distinctive combinations thereof that emerged from the consideration of such issues in the work of modern philosophers Furthermore this volume covers not only the canonical modern figures namely Descartes Spinoza Leibniz Locke Berkeley Hume and Kant but also more neglected figures such as Pierre Gassendi Pierre Sylvain Regis Nicolas Malebranche Henry More Ralph Cudworth and John Norris
