GUIDE FOR CONTAINING SURFACE PREPARATION DEBRIS GENERATED DURING PAINT REMOVAL OPERATIONS

1. SCOPE

1.1 This guide describes methods of paint removal, containment systems, and procedures for minimizing or preventing emissions from escaping the work area, and procedures for assessing the adequacy of the controls over emissions.

1.2 The containment systems are categorized in up to four classes per type of paint removal method, based on the extent to which emissions are controlled.

1.3 This guide is primarily intended for use with steel structures; however, some of the methods and materials may be suited for use on concrete, aluminum, wood, or other materials of construction.

1.4 This guide is intended for use by facility owners, specifiers, designers, and contractors. It may also be used by other interested parties.

1.5 A discussion of ventilation is included in the guide to assist users in both controlling emissions to the environment, and in enhancing worker protection and visibility within the containment. It is important to recognize that ventilation systems alone may or may not be sufficient to fully protect workers when the paint being removed contains lead or other toxic metals, and additional work practice and/or administrative controls and respiratory protection may be required to control worker exposures. Requirements or evaluation methods for worker health and safety are outside the scope of this guide.

Note: When toxic metals are referenced in the Guide, lead is often used as the example. This should not be construed to imply that lead is the only toxic metal contained in paints or abrasives, or that lead is the only toxic metal addressed in regulations. A number of toxic metals may be present in paint and abrasives, and regulations are available to address many of them.

2. DESCRIPTION AND DEFINITIONS

2.1 GENERAL: During surface preparation, airborne particulate and debris from the removal of paint (particularly paints containing lead, cadmium, and chromate pigments) can contaminate the air, soil, and water surrounding work sites. The potential environmental hazards are reduced by minimizing or eliminating the airborne particulate, and by containing and

collecting the debris. Controlling airborne particulate and other emissions may be necessary to comply with federal, state, and local regulations.

2.2 OUTLINE OF GUIDE

2.2.1 Procedures included in this guide:

- Selecting Methods of Surface Preparation and Debris Collection (Section 4.1)
- Specifying Containment Systems (Section 4.2)
- Selecting Methods for Assessing the Quantity of Emissions (Section 4.3)
- Implementing Containment Project (Section 4.4)

2.2.2 The guide also includes descriptions and commentaries on:

- Methods of Coating Removal (Section 5.1)
- Methods of Collecting Debris (Section 5.2)
- Containment Enclosure Components (Section 5.3)
- Ventilation System Components (Section 5.4)
- Methods for Assessing Quantity of Emissions (Section 5.5)

2.3 DEFINITIONS

2.3.1 Action Level for Lead: Employee exposure, without regard to the use of respirators, to an airborne concentration of lead of 30 micrograms per cubic meter of air (30 $\mu\text{g}/\text{m}^3$) calculated as an eight-hour TWA per OSHA General Industry Standard 29 CFR 1910.1025 and OSHA Construction Industry Standard 29 CFR 1926.62.

2.3.2 Containment System: A containment system includes the cover panels, screens, tarps, scaffolds, supports, and shrouds used to enclose an entire work area or a paint removal tool. The purpose is to minimize or prevent the debris generated during surface preparation from entering into the environment, and to facilitate the controlled collection of the debris for disposal. Containment systems may also employ the use of ground covers or water booms.

2.3.3 Emissions: When used in this guide, emissions from the containment that require control include airborne plumes of material, as well as spills or leaks of water, abrasive, paint chips, and debris.

2.3.4 Ventilation System: Ventilation systems include both natural ventilation and mechanical ventilation (fans,

Blast Cleaning Technology A. Momber, 2007-12-15 Blast cleaning is one of the most frequently utilised surface treatment method in modern industry Tilghman s patent on Improvement in cutting and engraving stone metal glass etc 1870 was the starting point of the utilisation of blast cleaning for industrial processes Early applications included applications in the foundry industry steel making industry and corrosion protection industry Today s applications include the use for micro machining polishing

maintenance and surface preparation for coating applications Recent advanced applications in the machining industry include blast cleaning assisted laser milling The book is the first comprehensive monograph in this subject It provides a practical and comprehensive review of the technology This book systematically and critically reviews the theory behind the technology the state of current blast cleaning surface quality aspects and the effects of blast cleaning on the performance of applied coatings *Handbook of Thermal Spray Technology* Joseph R. Davis, 2004-01-01 This reference covers principles processes types of coatings applications performance and testing and analysis of thermal spray technology It will serve as an introduction and guide for those new to thermal spray and as a reference for specifiers and users of thermal spray coatings and thermal spray experts Coverage encompasses basics of th Materials Performance ,2002 Lead-based Paint ,1998

Embracing the Beat of Term: An Emotional Symphony within **Sspc Technology Guide 6**

In a world consumed by monitors and the ceaseless chatter of instant connection, the melodic beauty and mental symphony developed by the written word often fade in to the backdrop, eclipsed by the persistent sound and disruptions that permeate our lives. But, located within the pages of **Sspc Technology Guide 6** a wonderful literary treasure overflowing with organic emotions, lies an immersive symphony waiting to be embraced. Crafted by an outstanding musician of language, that charming masterpiece conducts viewers on an emotional trip, well unraveling the hidden melodies and profound impact resonating within each carefully constructed phrase. Within the depths with this moving evaluation, we shall investigate the book is key harmonies, analyze its enthralling writing model, and surrender ourselves to the profound resonance that echoes in the depths of readers souls.
