Process-Structure-Properties in Polymer Additive Manufacturing Swee Leong Sing,Wai Yee Yeong,2021-09-01 Additive manufacturing AM methods have grown and evolved rapidly in recent years AM for polymers is an exciting field and has great potential in transformative and translational research in many fields such as biomedical aerospace and even electronics Current methods for polymer AM include material extrusion material jetting vat polymerisation and powder bed fusion With the promise of more applications detailed understanding of AM from the

processability of the feedstock to the relationship between the process structure properties of AM parts has become more critical. More research work is needed in material development to widen the choice of materials for polymer additive manufacturing. Modelling and simulations of the process will allow the prediction of microstructures and mechanical properties of the fabricated parts while complementing the understanding of the physical phenomena that occurs during the AM processes. In this book, state of the art reviews and current research are collated which focus on the process structure properties relationships in polymer additive manufacturing.

Ecological Forest Management Jerry F. Franklin, K. Norman Johnson, Debora L. Johnson, 2018-03-19 Fundamental changes have occurred in all aspects of forestry over the last 50 years including the underlying science, societal expectations of forests and their management and the evolution of a globalized economy. This textbook is an effort to comprehensively integrate this new knowledge of forest ecosystems and human concerns and needs into a management philosophy that is applicable to the vast majority of global forest lands. Ecological forest management (EFM) is focused on policies and practices that maintain the integrity of forest ecosystems while achieving environmental, economic and cultural goals of human societies. EFM uses natural ecological models as its basis, contrasting it with modern production forestry which is based on agronomic models and constrained by required return on investment. Sections of the book consider: 1 Basic concepts related to forest ecosystems and silviculture based on natural models; 2 Social and political foundations of forestry including law, economics and social acceptability; 3 Important current topics including wildfire, biological diversity and climate change; and 4 Forest planning in an uncertain world from small privately owned lands to large public ownerships. The book concludes with an overview of how EFM can contribute to resolving major 21st century issues in forestry including sustaining forest dependent societies.

Contesting Africa's New Green Revolution Jacqueline Ignatova, 2021-05-20 In this insightful critique of arguments for and against GMOs as a remedy for poverty, inequality and hunger in Africa, Ignatova illuminates the way the new Green Revolution serves as a vehicle for philanthrocapital, generating markets and wealth for global agribusiness in the name of pro-poor development. Sara Berry, Professor Emerita, Johns Hopkins University, USA. Ignatova's important book illuminates profound problems with public-private partnerships that skirt democratic accountability and empower wealthy interests at the expense of local communities. But it's not a despairing account; she centres Ghanaian activists and policy makers who are pioneering a new type of philanthropy, one emphasizing interdependency and social justice over anti-democratic efforts to privatize seed commons. A revelatory and insightful study. Linsey McGoe, Professor of Sociology, University of Essex, UK. Like a combine through a field of genetically modified maize, Jacqueline Ignatova cuts through the rhetoric surrounding the Green Revolution for Africa to reveal the underlying power politics and inequities that shape agricultural development in contemporary Ghana. Full of rich empirics and analytical insights, this book is essential reading for those seeking a comprehensive understanding of how public-private partnerships and philanthropy-driven initiatives are reshaping smallholder agriculture across the
