- Be sure to release the fuel pressure when the engine is off.
- Proceed to inspect the control cables and engine throttle operation and make sure the cables in good condition and in state of correct tension.
- Work in a well-ventilated area. Smoking or allowing flames or sparks in the work area or where gasoline is stored is prohibited.
- Do not touch electrically sensitive electronic components in the course of the throttle cable, which is coated with conductive grease.
- Do not adjust the throttle cable from full open to full close after the throttle cable has been removed. It may cause harm to the throttle.
- Read the throttle body service points with care or a clean cloth to keep dirt and debris from entering the intake ports after the throttle body has been removed.
- Do not apply excessive force to the fuel pipe as the throttle body, since removing or installing the throttle body.
- Do not damage the throttle body. It may cause incorrect throttle cable adjustment.
- Throttle body and delivery hose: removing the throttle body, fuel hose and return hose. Open drain using compressed air.
- Do not push the fuel pump hose under the fuel tank while the fuel tank is closed.
- Always replace the gasket when the fuel tank is removed.
- The programmed fuel injection system is equipped with a fuel diagnostic system (page 3-7). If the diagnostic system is active (MIL), consult the fuel diagnostic procedures to remove the problem.
- When checking the PCM FL, always follow the steps in the diagnostic flow chart (page 3-11).
- The PCM FL system is provided with a fuel rate function to ensure a minimum running capability, even if there is trouble in the system. When this functionality is activated by the fuel diagnostic function, running capability is ensured by maintaining the fuel injection rate of a reference engine in advance to the programmed program rate. It should be noted that the fuel function stops the engine from the detection of a fault in the injection system (the ignition and camshaft generator, the fuel pump and fuel filter system) (page 3-8).
- A faulty PCM FL system is often related to poorly connected or corroded connections. Check these connections before proceeding.
- Refer to procedures for fuel level sensor inspection (page 3-13).
- The vehicle speed sensor sends a digital pulse signal to the ECM (PCM FL) and the transmission. Refer to procedures for vehicle speed sensor inspection (page 3-15).
- When disconnecting the programmed fuel injection parts, note the location of the O-rings. Replace them with new ones again, necessarily.
- Before disconnecting the fuel lines, release the fuel pressure by disconnecting the fuel main supply line at the fuel tank. Always replace the sealing members when the fuel main supply line is removed or loosened.
- Use a digital tester to check FL system operation.
