Artificial Intelligence and Literary Creativity Selmer Bringsjord, David Ferrucci, 1999-09-01 Is human creativity a wall that AI can never scale Many people are happy to admit that experts in many domains can be matched by either knowledge based or sub symbolic systems but even some AI researchers harbor the hope that when it comes to feats of sheer brilliance mind over machine is an unalterable fact In this book the authors push AI toward a time when machines can autonomously write not just humdrum stories of the sort seen for years in AI but first rate fiction thought to be the province of human genius It reports on five years of effort devoted to building a story generator the BRUTUS 1 system This book was written for three general reasons The first theoretical reason for investing time money and talent in the quest for a truly creative machine is to work toward an answer to the question of whether we ourselves are machines The second theoretical reason is to silence those who believe that logic is forever closed off from the emotional world of creativity The practical rationale for this endeavor and the third reason is that machines able to work alongside humans in arenas calling for creativity will have incalculable worth
