

Typical Construction Methods

This chapter will deal with typical details and methods commonly adopted for each of the four traditional

building systems outlined below. The drawings below are enlarged on the following pages.

TIMBER FRAME (Page 6)

The timber framed house can be applied to one or more storeys. The external surface can be clad with timber or manufactured weatherboards and panelling, or acrylic render can be applied. Structural load bearing is performed by the timber frame.

BRICK VENEER (Page 11)

The brick walls are a facade anchored with brick ties to a timber or steel frame. The frame performs the structural load bearing work supporting the roof, ceiling and wall linings. A cavity space is provided between the frame and brick wall. This cavity acts as a moisture barrier.

CAVITY BRICK (double brick) (Page 26)

Cavity brick construction is two brick walls standing side by side separated by a cavity, tied together with brick ties that cross the cavity and embedded into the mortar joints. Floors can be either concrete slab or timber.

HOLLOW CONCRETE BLOCK MASONRY (190 single leaf) (Page 36)

Reinforcing and grout is usually applied to specific vertical cores, lintels and a top perimeter bond beam. Walls can be cement or acrylic rendered on one or both sides or simply painted to reduce costs. Alternatively, plasterboard linings can be applied to the internal surface.
