Lightweight Ballistic Composites Ashok Bhatnagar, 2016-04-19 Lightweight Ballistic Composites Military and Law Enforcement Applications Second Edition is a fully revised and updated version of this informative book that explores the many changes in composite materials technology that have occurred since the book's first release in 2008 especially the type of commercial products used by armed forces around the world. Some changes can be attributed to the wars in Iraq and Afghanistan whereas others are due to massive investment by private companies to neutralize the ever increasing global threats and fulfill the military's appetite for lighter materials. Soldiers are now better protected against new ballistic threats and the overall weight of body protection has been reduced while comfort has increased. New military vehicles are no longer purely armored with steel and are instead lined with lightweight ballistic materials that increase the distance military vehicles can travel without refueling and also improve maneuverability. The book considers all aspects of lightweight ballistic composites from fiber manufacturing to commercial products and testing. Chapters also cover the many uses of lightweight ballistic composites in the military and law enforcement industries. It will be an invaluable reference for ballistic composite design engineers, product development engineers and all those involved in promoting new products for both defense and the law enforcement industry. Gives comprehensive coverage on all aspects of lightweight ballistic composites from fiber manufacturing to commercial products and testing. Discusses the wider applications of lightweight ballistic composites in military and law enforcement industries. Edited by a highly respected industry expert with over thirty years experience developing lightweight composite ballistic materials and products. **Aerospace Materials and Material Technologies**

The chapters are authored by pioneers of industrial aerospace material technologies. This book has a well planned layout in 4 parts. The first part deals with primary metal and material processing including nano manufacturing. The second part deals with materials characterization and testing methodologies and technologies. The third part addresses structural design. Finally several advanced material technologies are covered in the fourth part. Some key advanced topics such as Structural Design by ASIP, Damage Mechanics Based Life Prediction and Extension and Principles of Structural Health Monitoring are dealt with at equal length as the traditional aerospace materials technology topics. This book will be useful to students, researchers and professionals working in the domain of aerospace materials. **The Modern Weaponry of the World's Armed Forces** Col. Surviving the Ride Steve Camp,Helmoed-Römer Heitman,2014-09-19 Mine protected and mine resistant ambush protected MRAP vehicles are today standard in the US most major western armed forces and many other armies as a result of the wars in Iraq and Afghanistan The South African Army was already routinely using mine protected armored personnel carriers and patrol vehicles forty years ago even if they looked primitive and ungainly A few years later the South African Army had reached the stage where it could deploy entire combat groups into battle zones equipped with only mine protected vehicles including their ambulances and supply trucks By then the mine protected vehicles had also become effective for use in combat rather than just protected transport the Casspir being the chief example More to the point they saved countless soldiers and policemen from death or serious injury and the basic concepts now live on in the various MRAP types in service today The valuable lessons learned by the South Africans with their early designs of these combat proven vehicles has led the country to become one of the global leaders in the design of MRAPs which are locally manufactured and exported around the world *Surviving the Ride* is a fascinating pictorial account featuring more than 120 of these unique South African developed vehicles spanning a forty year period with over 280 photographs many of which are previously unpublished
