 mathematical rationality contained in the making of string figures It does so by using interdisciplinary methods borrowed
 from anthropology mathematics history and philosophy of mathematics The practice of string figure making has long been
 carried out in many societies and particularly in those of oral tradition It consists in applying a succession of operations to a
 string knotted into a loop mostly using the fingers and sometimes the feet the wrists or the mouth This succession of
 operations is intended to generate a final figure The book explores different modes of conceptualization of the practice of
 string figure making and analyses various source material through these conceptual tools it looks at research by
 mathematicians as well as ethnographical publications and personal fieldwork findings in the Chaco Paraguay and in the
 Trobriand Islands Papua New Guinea which all give evidence of the rationality that underlies this activity It concludes that
 the creation of string figures may be seen as the result of intellectual processes involving the elaboration of algorithms and
