

How SSL Certificates Work

SSL certificates create encrypted connections through a shared secret key.

1

The user enters an HTTPS address.

2

The server shares its SSL certificate and a public key.

3

Your browser verifies the SSL certificate.

4

Your browser sends encrypted data and a secret key.

5

The server decrypts the data and receives the secret key.

6

The web browser and server share encrypted data using the shared secret key.
