- I. Sources of sounds
- II. How sound is transmitted
- III. Speed of sound in the three states of matter
- IV. Characteristics of sound

**CONTENTS:**Sources of sound

Sound is obtained as a result of vibration in a material medium such as air and water, which helps to transmit wave. The nature of the vibration determines the type of sound produced. It is a longitudinal wave. Sound has a number of sources including sound from animals, moving aircraft, vehicles, vibrating tuning fork, etc. Sound wave is also a mechanical wave. That is, it cannot travel through vacuum. There must be a material medium for its to propagate. Astronauts on the moon can only communicate each other via walkie-talkie even at close distance because there is no air molecule to propagate sound wave on the moon.
