Parkes,2012-12-06 1 1 Overview This chapter briefly describes what this book is about what this book tries to do what this book tries not to do a useful feature of the book the exercises 1 2 What This Book Is About This book is about three key topics of computer science namely computable lan guages abstract machines and logic Computable languages are related to what are usually known as formal lan guages I avoid using the latter phrase here because later on in the book I distin guish between formal languages and computable languages In fact computable languages are a special type of formal languages that can be processed in ways considered in this book by computers or rather abstract machines that represent computers Abstract machines are formal computing devices that we use to investigate prop erties of real computing devices The term that is sometimes used to describe abstract machines is automata but that sounds too much like real machines in particular the type of machines we call robots The logic part of the book considers using different types of formal logic to represent things and reason about them The logics we consider all play a very important role in computing They are Boolean logic propositional logic and first order predicate logic FOPL *Conservative Thinkers* Peter Viereck,2017-07-05 Across America today conservatism is being hotly debated both across the political spectrum and within the conservative movement itself Much of the public debate is without definition or historical context This history of conservatism by renowned historian social critic and poet Peter Viereck aims to meet the need for a concise balanced picture of conservative thought in all its different shadings and cultural contexts The analytical portion of the book provides a succinct but thorough critical overview of

conservatism's most representative figures Viereck begins with chapters defining conservatism itself its special technical terms and its changing historical circumstances The rest deals with its actual thinkers and statesmen After each main conservative thesis the anti conservative rebuttal is summarized and the reader is allowed to reach his own conclusions Though the first stress is on conservative political philosophy from John Adams to Churchill key sections also stress non political conservatism in religion Cardinal Newman and in the primarily cultural protest against material progress Coleridge Dostoyevsky Melville Henry Adams Every major point is concretely illustrated by an appended cross reference to a primary source in the second half a well chosen anthology of key conservative documents Criteria for inclusion are three representativeness depth of perception importance of influence The result is not uniformity but a gamut from extreme intolerant reaction to an evolutionary moderate spirit The former passes imperceptibly into authoritarianism the latter into liberalism
