Design of Racing and High-Performance Engines 1998-2003 Daniel J Holt, 2003-08-05 The 53 technical papers in this book show the improvements and design techniques that researchers have applied to performance and racing engines They provide an insight into what the engineers consider to be the top improvements needed to advance engine technology and cover subjects such as 1 Direct injection 2 Valve spring advancements 3 Turbocharging 4 Variable valve control 5 Combustion evaluation and 5 New racing engines *Handbook of Automotive Powertrain and Chassis Design* John Fenton, 1998-02-27 John Fenton provides an in depth study for specialists concerned with chassis and powertrain systems This text also includes reviews and up to date applications offering a comprehensive reference source Advances in Automotive Control 1995 L. Guzzella, U. Kiencke, 2016-01-07 Automotive Control is a rapidly developing field for both researchers and industrial practitioners The field itself is wide ranging and includes engine control vehicle dynamics on board diagnosis and vehicle control issues in intelligent vehicle highway systems Leading researchers and industrial practitioners were able to discuss and evaluate current developments and future research directions at the first international IFAC workshop on automotive control This publication contains the papers covering a wide range of topics presented at the workshop *Assessment of Fuel Economy Technologies for Light-Duty Vehicles* National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on the Assessment of Technologies for Improving Light-Duty Vehicle Fuel Economy, 2011-07-03 Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars sport utility vehicles minivans and other light duty vehicles without compromising vehicle performance or safety Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines spark ignition gasoline compression ignition diesel and hybrid According to its estimates adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark ignition engines could reduce fuel consumption by 29 percent at an additional cost of 2 200 to the consumer Replacing spark ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately 5 900 per vehicle and replacing spark ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of 6 000 per vehicle The book focuses on fuel consumption the amount of fuel consumed in a given driving distance because energy savings are directly related to the amount of fuel used In contrast fuel economy measures how far a vehicle will travel with a gallon of fuel Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information **Combustion** ,1927 International Journal of Vehicle Design ,2002
