Intermediate Microeconomics Steve Erfle, 2017-09-14 The overarching premise of this text is that microeconomics is most effectively learned in an active learning interactive environment Students have access to more than 200 Interactive Excel Figures in the online text that allow them to move the graphs using sliders and click boxes This interactivity helps students understand how graphic elements relate to one another These files do not require knowledge of Excel More figures than are typical and many of the figures involve multiple scenarios of the same basic graph Often the text employs interactive questions that require interpreting these scenarios questions posed are answered at the bottom of the page Despite the geometric orientation this text is not light on algebraic analysis The geometry is backed up by the relevant algebra More than 500 equations are numbered for easy reference both within and across chapters And just like the geometry the algebra is essentially error free because it was used to create the graphs The geometric orientation is perfect for the non calculus enhanced classroom but the text can be readily used in a calculus based class because a calculus treatment of the material is provided in appendices and endnotes and calculus based problems are included in the Intermediate Microeconomics An Interactive Approach Workbook

Intermediate Microeconomics Samiran Banerjee, 2014-09-15 Intermediate Microeconomics A Tool Building Approach is a clear and concise calculus based exposition of current microeconomic theory essential for students pursuing degrees in Economics or Business This beautifully presented and accessible text covers all the essential topics that are typically required at the intermediate level from consumer and producer theory to market structure perfect competition monopoly and oligopoly Topics covered include risk game theory general equilibrium and externalities asymmetric information and public goods Using numerical examples as well as sophisticated and carefully designed exercises the book aims to teach microeconomic theory via a process of learning by doing When there is a skill to be acquired a list of steps outlining the procedure is provided followed by an example to illustrate how this procedure is carried out Once the procedure has been learned students will be able to solve similar problems and be well on their way to mastering the skills needed for future study Intermediate Microeconomics presents a tremendous amount of material in a concise way without sacrificing rigor clarity or exposition Through use of this text students will acquire both the analytical toolkit and theoretical foundations necessary in order to take upper level courses in industrial organization international trade public finance and other field courses Instructors that would like to consider Intermediate Microeconomics A Tool Building Approach for course adoption will have access to the book's free companion website featuring Detailed answers to end of chapter questions All figures used in the book as PDF files suitable for inclusion in PowerPoint slides Chapter by Chapter zipped files of worksheets quizzes suitable for classroom use Problem sets are available on WebAssign for instructors who wish to use them These are located at http://www.webassign.net/features/textbooks/banerjeeecon1_details.html publisher Please contact the author at banerjeemicro@gmail.com for details or visit his website at <http://banerjeemicro.com>

Computational Economics
David A. Kendrick, P. Ruben Mercado, Hans M. Amman, 2011-10-23
The ability to conceptualize an economic problem verbally, to formulate it as a mathematical model, and then represent the mathematics in software so that the model can be solved on a computer is a crucial skill for economists. *Computational Economics* contains well-known models and some brand new ones designed to help students move from verbal to mathematical to computational representations in economic modeling. The authors' focus, however, is not just on solving the models but also on developing the ability to modify them to reflect one's interest and point of view. The result is a book that enables students to be creative in developing models that are relevant to the economic problems of their times. Unlike other computational economics textbooks, this book is organized around economic topics among them macroeconomics, microeconomics, and finance. The authors employ various software systems including MATLAB, Mathematica, GAMS, the nonlinear programming solver in Excel, and the database systems in Access to enable students to use the most advantageous system. The book progresses from relatively simple models to more complex ones and includes appendices on the ins and outs of running each program. The book is intended for use by advanced undergraduates and professional economists and even as a first exposure to computational economics by graduate students. Organized by economic topics, progresses from simple to more complex models. Includes instructions on numerous software systems. Encourages customization and creativity.

Diffusion Dynamics of Energy-Efficient Renovations Matthias Otto Müller, 2013-11-01
Accelerating the diffusion of energy-efficient renovations is a key policy lever in order to reduce the environmental impact of buildings. This book provides a broad systemic perspective on the causes of the diffusion of energy-efficient renovations in Switzerland and policy recommendations for accelerating the diffusion process. Specifically, the book provides a description of the societal problem situation within which the diffusion process takes place and an analysis of the actors involved. It provides a detailed explanation of the causes of the diffusion process that synthesizes insights from the engineering, economics, marketing, sociology, communication studies, and political science literature. It employs the System Dynamics methodology to simulate the diffusion process and analyze policy levers. The book proposes two regulations and a sketch of a business model as particularly promising public policy interventions. It concludes with an outline of a generic theory of the diffusion of sustainable technologies.
