Analytical Chemistry Associated with the Destruction of Chemical Weapons M. Heyl, Raymond R. McGuire, 2012-12-06 One of the

major problems associated with the disposal of chemical weapons is that the agents have degraded over time some quite seriously. Detecting and identifying the products of this decomposition are necessary prerequisites to the safe complete and environmentally benign destruction of stockpiled weapons. The book presents and discusses both basic and novel techniques in a variety of areas of analytical chemistry which are relevant to achieving the ultimate destruction of chemical weapons. Presentations address sample collection and preparation, mass spectrometry, chromatographic techniques, NMR, and air monitoring techniques. The work shows that analytical methods do exist to effectively support the destruction of chemical munitions. While further research is needed, the book provides an excellent baseline for further advances in the field. **LC GC**, 1988. **Proceedings of the 1995 ERDEC Scientific Conference on Chemical and Biological Defense Research, 14-17 November 1995**, 1996. **Fruit Processing**, 1998. *New York State Contract Reporter*, 1996-10. Johnson, 2001. **Headspace Analysis of Foods and Flavors** American Chemical Society. Meeting, 2001-08-31. Headspace gas analysis is an analytical technique that has been successfully applied to food flavors for over 20 years but has experienced a resurgence of interest and innovation in recent years. In its truest form, headspace analysis represents the direct collection and analysis of the mixture of vapors in the space immediately above a food or beverage. The technique offers several advantages for workers interested in how a product smells and ultimately tastes. It offers the advantages of speed, simplicity, and more importantly, represents the aroma profile a consumer is likely to experience just before consuming the product. Since only volatile components are collected, the sample is totally free of nonvolatile residues which commonly plague comparison liquid-liquid extracts of the same product. This is the first book devoted to headspace analysis in foods and beverages in more than 20 years. The publication contains chapters on the basic theory of headspace analysis as well as the theory and application of newly developed headspace techniques such as solid phase micro extraction (SPME) and electronic noses. New concentrating and desorption techniques are described in addition to a raft of food applications including tomato and citrus juices, alcoholic beverages, baguettes, dairy products, lipids, grill flavoring, baked potato, and meat. Chapters on off flavors as well as aroma-food matrix interactions are also included. This is the bible of headspace analysis. If you are involved in or planning on becoming involved or want to learn more about this incredible subject, then buy this book immediately.
