

## TECHNICAL/MECHANICAL TEST-FIELD II (TMTF II) TEST INFORMATION PAMPHLET

### WHY DO AT&T AND ITS AFFILIATES TEST?

When individuals are being considered for our available job openings, they go through a selection process to measure their skills and abilities to determine if they can perform the jobs in a satisfactory manner. It is to the advantage of both you, as a job candidate, and the company that only those who can perform at acceptable levels be placed on the job. Research has shown that tests provide accurate measures of people's skills and abilities and, therefore, we use tests to help identify people best suited for our job openings.

### WHAT IS THE TECHNICAL/MECHANICAL TEST-FIELD II (TMTF II)?

The TMTF II consists of 50 items that assess your ability to solve problems of a technical, logical and mechanical nature. The test draws on the kind of reasoning needed for certain technician jobs. The test takes approximately 50 minutes to complete. Below are some sample questions:

#### Sample Question 1

**Perception and Cognition: Interactions in the Aging Brain** Harriet A. Allen, Katherine L. Roberts, 2016-09-13

Healthy ageing can lead to declines in both perceptual and cognitive functions. Impaired perception, such as that resulting from hearing loss or reduced visual or tactile resolution, increases demands on higher level cognitive functions to cope or

compensate It is possible for example to use focused attention to overcome perceptual limitations Unfortunately cognitive functions also decline in old age This can mean that perceptual impairments are exacerbated by cognitive decline and vice versa but also means that interventions aimed at one type of decline can lead to improvements in the other Just as improved cognition can ameliorate perceptual deficits improving the stimulus can help offset cognitive deficits For example making directions and routes easy to follow can help compensate for declines in navigation abilities In this Topic we bring together papers from both auditory and visual researchers that address the interaction between perception and cognition in the ageing brain Many of the studies demonstrate that a broadening of representations or increased reliance on gist underlie perceptual and cognitive age related declines There is also clear evidence that impaired perception is associated with poor cognition although encouragingly it can also be seen that good perception is associated with better cognition Compensatory cognitive strategies were less successful in improving perception than might be expected We also present papers which highlight important methodological considerations that are required when studying the older brain
