Models and Analysis for Distributed Systems Serge Haddad, Fabrice Kordon, Laurent Pautet, Laure Petrucci, 2013-02-07
Nowadays distributed systems are increasingly present for public software applications as well as critical systems software applications as well as critical systems This title and Distributed Systems Design and Algorithms from the same editors introduce the underlying concepts the associated design techniques and the related security issues The objective of this book is to describe the state of the art of the formal methods for the analysis of distributed systems Numerous issues remain open and are the topics of major research projects One current research trend consists of profoundly mixing the design modeling verification and implementation stages This prototyping based approach is centered around the concept of model refinement This book is more specifically intended for readers that wish to gain an overview of the application of formal methods in the design of distributed systems Master s and PhD students as well as engineers in industry will find a global understanding of the techniques as well as references to the most up to date works in this area

The Middle School Writing Toolkit Tim Clifford, 2013 The Middle School Writing Toolkit addresses the 5 major writing genres that middle school students are expected to master reports persuasive essays how to procedural essays narratives and literary responses and provides 57 mini lessons and more than 200 workstation tasks to start English teachers well on their way to creating a successful writing program in the classroom

Design and Control of Workflow Processes Hajo Reijers, 2003-04-07 The motivation behind the conception of this monograph was to advance scientific knowledge about the design and control of workflow processes A workflow process or workflow for short is a specific type of business process a way of organizing work and resources Workflows are commonly found within large administrative organizations such as banks insurance companies and governmental agencies Carrying out the tasks of a workflow in a particular order is required to handle one type of case Examples of cases are mortgage applications customer complaints and claims for unemployment benefits A workflow used in handling mortgage applications may contain tasks for recording the application specifying a mortgage proposal and approving the final policy The monograph concentrates on four workflow related issues within the area of Business Process Management the field of designing and controlling business processes The first issue is how workflows can be adequately modeled Workflow modeling is an indispensable activity to support any reasoning about workflows Different purposes of workflow modeling can be distinguished such as system enablement by Workflow Management Systems knowledge management costing and budgeting The focus of workflow modeling in this monograph is a to support simulation and analysis of workflows and b to specify a new workflow design The main formalism used for the modeling of workflows is the Petri net Many existing notions to define several relevant properties have been adopted such as the workflow net and the soundness notion

Modeling Time in Computing Carlo A. Furia, Dino Mandrioli, Angelo Morzenti, Matteo Rossi, 2012-10-19 Models that include a notion of time are ubiquitous in disciplines such as the natural sciences engineering philosophy and linguistics but in computing the abstractions provided

by the traditional models are problematic and the discipline has spawned many novel models This book is a systematic thorough presentation of the results of several decades of research on developing analyzing and applying time models to computing and engineering After an opening motivation introducing the topics structure and goals the authors introduce the notions of formalism and model in general terms along with some of their fundamental classification criteria In doing so they present the fundamentals of propositional and predicate logic and essential issues that arise when modeling time across all types of system Part I is a summary of the models that are traditional in engineering and the natural sciences including fundamental computer science dynamical systems and control theory hardware design and software algorithmic and complexity analysis Part II covers advanced and specialized formalisms dealing with time modeling in heterogeneous software intensive systems formalisms that share finite state machines as common ancestors Petri nets in many variants notations based on mathematical logic such as temporal logic process algebras and dual language approaches combining two notations with different characteristics to model and verify complex systems e g model checking frameworks Finally the book concludes with summarizing remarks and hints towards future developments and open challenges The presentation uses a rigorous yet not overly technical style appropriate for readers with heterogeneous backgrounds and each chapter is supplemented with detailed bibliographic remarks and carefully chosen exercises of varying difficulty and scope The book is aimed at graduate students and researchers in computer science while researchers and practitioners in other scientific and engineering disciplines interested in time modeling with a computational flavor will also find the book of value and the comparative and conceptual approach makes this a valuable introduction for non experts The authors assume a basic knowledge of calculus probability theory algorithms and programming while a more advanced knowledge of automata formal languages and mathematical logic is useful

Time of Transitions Jürgen Habermas, 2016-04-27 We live in a time of turbulent change when many of the frameworks that have characterized our societies over the last few centuries such as the international order of sovereign nation states are being called into question In this new volume of essays and interviews Habermas focuses his attention on these processes of change and provides some of the resources needed to understand them What kind of international order should we seek to create in our contemporary global age How should we understand the political project of Europe and how can the democratic deficit of the EU be overcome How should we understand the relation between democracy as popular sovereignty which has become the defining principle of political legitimacy in the modern world and the idea of basic human rights embodied in the rule of law Habermas brings his formidable powers of analysis and his distinctive theoretical perspective to bear on these and other key questions of the modern age His analysis is shaped throughout by his commitment to informed public debate and his powerful advocacy of a postnational renewal of the project of constitutional democracy Time of Transitions will be essential reading for all students and scholars of sociology and politics and it will be of interest to anyone concerned with the key social and political questions of our time *Teachable Transitions*

Hybrid Systems: Computation and Control Magnus Egerstedt, Bud Mishra, 2008-07-18

This volume contains the proceedings of the 11th Workshop on Hybrid Systems

Computation and Control HSCC 2008 held in St Louis Missouri during April 22-24, 2008. The annual workshop on hybrid systems focuses on research in embedded reactive systems involving the interplay between symbolic switching and continuous dynamical behaviors. HSCC attracts academic as well as industrial researchers to exchange information on the latest developments of applications and theoretical advancements in the design, analysis, control, optimization, and implementation of hybrid systems with particular attention to embedded and networked control systems. New for this year was that HSCC was part of the inaugural CPSWEEK Cyber Physical Systems Week, a co-located cluster of three conferences: HSCC, RTAS Real Time and Embedded Technology and Applications Symposium, and IPSN International Conference on Information Processing in Sensor Networks. The previous workshops in the series of HSCC were held in Berkeley USA (1998), Nijmegen The Netherlands (1999), Pittsburgh USA (2000), Rome Italy (2001), Palo Alto USA (2002), Prague Czech Republic (2003), Philadelphia USA (2004), Zurich Switzerland (2005), Santa Barbara USA (2006), and Pisa Italy (2007). We would like to thank the Program Committee members and the reviewers for an excellent job of evaluating the submissions and participating in the online Program Committee discussions. We are grateful to the Steering Committee for their helpful guidance and support. We would also like to thank Patrick Martin for putting together these proceedings and Jiuguang Wang for developing and maintaining the HSCC 2008 website. January 2008. Magnus Egerstedt, Bud Mishra. Organization: HSCC 2008 was technically co-sponsored by the IEEE Control Systems Society and organized in cooperation with ACM SIGBED.
