Autonomous Vehicles for Safer Driving Ronald K Jurgen, 2013-04-16 Self driving cars are no longer in the realm of science fiction thanks to the integration of numerous automotive technologies that have matured over many years. Technologies such as adaptive cruise control, forward collision warning, lane departure warning and V2V V2I communications are being merged into one complex system. The papers in this compendium were carefully selected to bring the reader up to date on successful demonstrations of autonomous vehicles, ongoing projects and what the future may hold for this technology. It is divided into three sections: overview, major design and test collaborations, and a sampling of autonomous vehicle research projects. The comprehensive overview paper covers the current state of autonomous vehicle research and development as well as obstacles to overcome and a possible roadmap for major new technology developments and collaborative relationships. The section on major design and test collaborations covers DARPA contests and the USDOT and the Crash Avoidance Metrics Partnership Vehicle Safety Communications CAMP VSC2 Consortium. The final section presents seven SAE papers on significant recent and ongoing research by individual companies on a variety of approaches to autonomous vehicles. This book will be of interest to a wide range of readers: engineers at automakers and electronic component suppliers, software engineers, computer systems analysts and architects, academics and researchers within the electronics, computing and automotive industries, legislators, managers and other decision makers in the government, highway sector, traffic safety professionals and insurance and legal practitioners.

Connectivity and the Mobility Industry Andrew Brown, 2011-10-24 Bound to play an ever increasing role in the driver-vehicle relationship, connectivity is becoming a basic consumer requirement when it comes to choosing a vehicle. Moving from the computer into the car, the ability to stay in touch, informed and entertained has reached yet a higher level of technology ubiquity. Featuring 20 SAE technical papers published in 2010 and 2011, *Connectivity and the Mobility Industry* addresses important aspects of one of the most cutting edge topics in the industry today. Edited by Dr Andrew Brown Jr, 2010 SAE International President and Chief Technologist for Delphi Corporation, this book also includes three original articles on the subject written by various experts: *What to Expect Beyond 2015*, *Fourth Generation Wireless* and *the Vehicle: The Evolution of the Driving Experience and Associated Technologies*. *Wireless Charging of Electric Vehicle Converged with Communication Technology* is part of the new paradigm of green, safe and connected. This title is of special interest to those looking for an integrated view of how the driving experience will develop within these boundaries and what emerging technologies are likely to be successful in the upcoming years. This book is the third in the trilogy from SAE on Safe, Green and Connected vehicles in the mobility industry, edited by Dr Andrew Brown Jr. The other two books in this trilogy are *Green Technologies and the Mobility Industry*, *Active Safety and the Mobility Industry*. Buy a combination of books and save. This trilogy can be purchased in a combination of two books as follows: *Green Technologies and Active Safety in the Mobility Industry*, *Green Technologies and Connectivity in the Mobility Industry*, *Active*
