

Substitute numerical values and evaluate N :

$$N = \frac{(8.5 \text{ in}) \left(2.540 \frac{\text{cm}}{\text{in}} \right)}{\left(5 \text{ nm} \times \frac{10^{-9} \text{ m}}{\text{nm}} \right) (15)} = \boxed{3 \times 10^6}$$

17 **→** There is an environmental debate over the use of cloth versus disposable diapers. (a) If we assume that between birth and 2.5 y of age, a child uses 3 diapers per day, estimate the total number of disposable diapers used in the United States per year. (b) Estimate the total landfill volume due to these diapers, assuming that 1000 kg of waste fills about 1 m³ of landfill volume. (c) How many square miles of landfill area at an average height of 10 m is needed for the disposal of diapers each year?

Picture the Problem We'll assume a population of 300 million and a life expectancy of 76 y. We'll also assume that a diaper has a volume of about half a liter. In (c) we'll assume the disposal site is a rectangular hole in the ground and use the formula for the volume of such an opening to estimate the surface area required.

(a) Express the total number N of disposable diapers used in the United States per year in terms of the number of children n in diapers and the number of diapers D used by each child per year:

$$N = nD \quad (1)$$

Use the estimated daily consumption and the number of days in a year to estimate the number of diapers D required per child per year:

$$\begin{aligned} D &= \frac{3 \text{ diapers}}{\text{child} \cdot \text{d}} \times \frac{365.24 \text{ d}}{\text{y}} \\ &\approx 1.1 \times 10^3 \text{ diapers/child} \cdot \text{y} \end{aligned}$$

Use the assumed life expectancy to estimate the number of children n in diapers yearly:

$$\begin{aligned} n &= \left(\frac{2.5 \text{ y}}{76 \text{ y}} \right) (300 \times 10^6 \text{ children}) \\ &\approx 10^7 \text{ children} \end{aligned}$$

Substitute numerical values in equation (1) to obtain:

$$\begin{aligned} N &= (10^7 \text{ children}) \left(1.1 \times 10^3 \frac{\text{diapers}}{\text{y}} \right) \\ &\approx \boxed{1.1 \times 10^{10} \text{ diapers}} \end{aligned}$$

Student Solutions Manual for Tipler and Mosca's Physics for Scientists and Engineers, Sixth Edition: Chapters 1-20 Todd Ruskell, 2008 **Student Solutions Manual for Tipler and Mosca's Physics for Scientists and Engineers, Sixth Edition: Chapters 21-33** David S. Mills, 2008 **Student Solutions Manual for Modern Physics** Ralph Llewellyn, Paul A. Tipler, 2012-02-17 This book contains solutions to selected problems from each chapter approximately one fourth of the more than 800 problems in the book Physics for Scientists and Engineers Student Solutions Manual David Mills, 2007-05-18 The manual prepared by David Mills professor emeritus at the College of the Redwoods in California provides solutions for selected odd numbered end of chapter problems in the textbook and uses the same side by side format and level of detail as the Examples in the text *Student Solutions Manual for Tipler and Mosca's Physics for Scientists and Engineers, Sixth Edition: Chapters 1-20* David S. Mills, 2008 *Student Solutions Manual for Modern Physics, Sixth Edition, by Paul A. Tipler, Ralph A. Llewellyn* Mark J. Llewellyn, 2012 Physics for Scientists and Engineers Study Guide Paul A. Tipler, Gene Mosca, 2008-01-11 The study guide provides students with key physical quantities and equations misconceptions to avoid questions and practice problems to gain further understanding of physics concepts and quizzes to test student knowledge of chapters All written with the same level of detail as the examples found in the text *Physics for Scientists and Engineers Study Guide* Todd Ruskell, 2007 **Solutions to Problems in Heat Transfer. Transient Conduction Or Unsteady Conduction** Osama Mohammed Elmardi, 2017-03 Many heat transfer problems are time dependent Such unsteady or transient problems typically arise when the boundary conditions of a system are changed For example if the surface temperature of a system is altered the temperature at each point in the system will also begin to change The changes will continue to occur until a steady state temperature distribution is reached Consider a hot metal billet that is removed from a furnace and exposed to a cool air stream Energy is transferred by convection and radiation from its surface to the surroundings Energy transfer by conduction also occurs from the interior of the metal to the surface and the temperature at each point in the billet decreases until a steady state condition is reached The final properties of the metal will depend significantly on the time temperature history that results from heat transfer Controlling the heat transfer is one key to fabricating new materials with enhanced properties The author s objective in this textbook is to develop procedures for determining the time dependence of the temperature distribution within a solid during a transient process as well as for determining heat transfer between the solid and its surroundings The nature of the procedure depends on assumptions that may be made for the process If for example temperature gradients within the solid may be neglected a comparatively simple approach termed the lumped capacitance method or negligible internal resistance theory may be used to determine the variation of temperature with time The entire book has been thoroughly revised and a large number of solved examples and additional unsolved problems have been added This book contains comprehensive treatment of the subject matter in simple

and direct language The book comprises eight chapters All chapters are saturated with much needed text supported and by simple and self explanatory examples
