

General Mills (GMI) Global Warehouse Quality Manual

Per GMI standard 14.2 – all warehouses storing GMI owned material that are not physically connected to a make plant, must follow the requirements within this Global Warehouse Manual.

These are the minimum requirements to be followed as defined by General Mills unless applicable laws or regulations have more stringent requirements. General Mills requirements shall supersede local customs or practices.

Created by Debby Erwin 6/1/2018
Updated by Debby Erwin 04/15/2019

Policy 01: Product Regulatory Compliance

Warehouse facility shall have a Regulatory Contacts program. The documented procedures should be reviewed annually and should include the following minimal elements:

- ✓ Person or persons named (by position) to accompany all inspectors.
- ✓ Defined company/facility policy on the use of photographic and recording equipment.
- ✓ Defined company/facility policy regarding records and samples.
- ✓ Training plan to assure personnel stay current on procedures. (individual training should be documented)
- ✓ Procedures for reporting and documenting regulatory contacts.
- ✓ Procedures for developing, documenting, and verifying corrective actions.

The facility shall be in compliance with international, federal, state, and/or local registration and licensing requirements. The facility shall have programs in place to ensure compliance with import/export regulations for the country of manufacture and the country of sale.

Warehouses storing product that will be consumed in the USA need to register with the FDA and then reregister every even numbered year.

Facility shall communicate to GMI whenever a regulatory agency (or international equivalent) contact is made. Regulatory agencies in the United States could include (but not be limited to) FDA, USDA, applicable State Departments of Agriculture, State public health authorities, local public health authorities, State or Federal Department(s) of Labor (OSHA), EPA (or state equivalents). Contact, as defined, could include a telephone call, letter, or an on-site visitation.

The facility shall complete the GMI Regulatory Contact Report and e-mail it to their GMI contact and/or Regulatory.Contact@genmills.com within 24hrs (if there were observations requiring action) or 72hrs (if no observations or no action required). Note: if the warehouse is contracted/owned by a copacker to store GMI owned material (rather than contracted by GMI), then the copacker should be contacted if there is regulatory contact at the warehouse. In turn, the copacker will contact GM if General Mills product is impacted.

If General Mills samples are pulled by a Regulatory person, product should be held pending General Mills quality input.

Policy 02: Product Control Traceability Recall / Withdrawal

Traceability programs at each facility shall be challenged through a traceability test/mock recall at a minimum of once per year. Mock recall shall test one step back from the facility (i.e. origin of inbound material) and one step forward from the facility (i.e. destination of outbound material). All mock recalls shall be documented including:

- Identification of item traced (i.e. ingredient, finished product)
- Time for completion
- % of raw materials recovered
- % of finished product recovered

Warehouse Quality Manual:

Quality management systems for the food industry Andrew Bolton, 2012-12-06 In recent years there has been growing pressure for consistent product quality and a need for companies to demonstrate sound quality management practices in order to meet Due Diligence requirements of both legislation and the quality assurance practices of customers It has become accepted that operating to the requirements of the international standard for quality management BS EN ISO 900 goes a long way towards meeting these needs The objective of this book is to explain the requirements of the standard to offer advice about achieving those requirements and to indicate what the assessors will look for at assessment time It is important that certification to the standard is sought to support achievement of company objectives and not the reverse and of course the standard can apply to organizations and services just as much as to companies Thus the word company in the text should be treated accordingly Illustrative material has been presented under the logo of a fictitious company Quality Food Services in this context QFS does not bear any relationship whatsoever to any identically or similarly named business that may exist Readers will find it helpful to read the book with a copy of the standard to hand and are strongly encouraged to read the complete text before taking any steps to prepare for certification to the standard

Good Quality Practice (GQP) in Pharmaceutical Manufacturing: A Handbook

Jordi Botet, 2015-09-28 Pharmaceutical manufacturing can be viewed as a supply chain which spans from the production and purchase of the starting and packaging materials through the manufacture of dosage forms until the safe reception of the finished product by the patient. The entire chain comprises of several processes: auditing materials, purchase, procurement, production, storage, distribution, quality control, and quality assurance. The quality standard for pharmaceutical production is current good manufacturing practice (CGMP) which is applied within the frame of a pharmaceutical quality system (PQS). This implementation, however, requires a scientific approach and has to take into account several elements such as risk assessment, life cycle, patient protection, among other factors. Hence, pharmaceutical manufacturing is a complex subject in terms of regulation given the technical and managerial requirements. This comprehensive handbook describes CGMP for new professionals who want to understand and apply the elements which build up pharmaceutical quality assurance. The book gives details about basic quality control requirements such as risk management, quality hazards, and management systems, documentation, clean environments, personnel training, and gives guidelines on regulatory aspects. This is an ideal handbook for undergraduates studying pharmaceutical or industrial manufacturing and supply chains, as well for entrepreneurs and quality control professionals seeking to learn about CGMP standards and implementing quality assurance systems in the pharmaceutical sector.
