Major Issues in Cognitive Aging Timothy Salthouse,2010-01-27 In recent years the field of cognitive aging has flourished and expanded into many different disciplines It is probably therefore inevitable that some of the research has become very narrow primarily focused on counting and classifying the wrinkles of aged behavior rather than addressing more broad general and important questions Timothy Salthouse s main goal in this book is to try to identify some of the major phenomena in the field of cognitive aging and discuss issues relevant to the investigation and interpretation of them He does not attempt to provide a comprehensive survey of the research literature on aging and cognition because many excellent reviews are available in edited handbooks His principal aim is rather to stimulate readers to think about the big questions in cognitive aging research and how they might best be answered

Special Education Third Edition addresses issues of importance ranging from theory to practice and is a critical reference for researchers as well as those working in the special education field **Neuropsychological Evaluation of the Older Adult**

Joanne Green,2000-06-12 One of the largest patient populations seen by neuropsychologists are older adults suffering from problems associated with aging Further the proportion of the population aged 65 and above is rising rapidly This book provides a guide to neuropsychological clinicians increasingly called upon to assess this population The book details in a step by step fashion the phases and considerations in performing a neuropsychological assessment of an older patient It covers procedural details including review of patient s medical records clinical interview formal testing interpretation of test scores addressing referral questions and preparing an evaluation report Outlines a clear logical approach to neuropsychological evaluation Provides specific clinical practice guidelines for each phase of the evaluation Integrates clinical practice with up to date research findings Recommends specific tests for evaluating older adults Details how to interpret test findings and identify the patient s neuropsychological profile Illustrates important points with examples and case materials many neuropathologically confirmed Includes forms useful in clinical practice *Geriatric Residential Care* Robert D. Hill,Brian L. Thorn,John Bowling,Anthony Morrison,2013-06-17

This book s main goal is to examine the concept of residential care from a psychological perspective The chapter authors espouse a psychological approach to long term residential care and an effort is made throughout the text to present a model of care that encompasses the whole individual Since psychologists are being increasingly asked to provide consultation to long term residential care facilities the need for psychologically based care models has become apparent This text offers assistance in developing and maintaining residential care environments that maximize quality of life and personal well being in the presence of declining physical and emotional resources that are associated with the vicissitudes of living into advanced aging Geriatric Residential Care is divided into four parts Part I addresses psychological and social issues facing the frail elderly who are candidates for or are living in residential care settings Part II addresses issues in the assessment of individuals in residential care Part III highlights the design and execution of intervention strategies in residential care Part IV addresses how organizational aspects of residential care contexts can optimize the quality and meaningfulness of care **Handbook on the Neuropsychology of Aging and Dementia**

Lisa D. Ravdin,Heather L. Katzen,2012-09-14 With the aging of the baby boomers and medical advances that promote longevity older adults are rapidly becoming the fastest growing segment of the population As the population ages so does the incidence of age related disorders Many predict that 15% 20% of the baby boomer generation will develop some form of cognitive decline over the course of their lifetime with estimates escalating to up to 50% in those achieving advanced age Although much attention has been directed at Alzheimer s disease the most common form of dementia it is estimated that nearly one third of those cases of cognitive decline result from other neuropathological mechanisms In fact many patients diagnosed with Alzheimer s disease likely have co morbid disorders that can also influence cognition i e vascular

cognitive impairment suggesting mixed dementias are grossly under diagnosed The Clinical Handbook on the Neuropsychology of Aging and Dementia is a unique work that provides clinicians with expert guidance and a hands on approach to neuropsychological practice with older adults The book will be divided into two sections the first addressing special considerations for the evaluation of older adults and the second half focusing on common referral questions likely to be encountered when working with this age group The authors of the chapters are experts and are recognized by their peers as opinion leaders in their chosen chapter topics The field of neuropsychology has played a critical role in developing methods for early identification of late life cognitive disorders as well as the differential diagnosis of dementia Neuropsychological assessment provides valuable clinical information regarding the nature and severity of cognitive symptoms associated with dementia Each chapter will reinforce the notion that neuropsychological measures provide the clinician with sensitive tools to differentiate normal age related cognitive decline from disease associated impairment aid in differential diagnosis of cognitive dysfunction in older adults as well as identify cognitive deficits most likely to translate into functional impairments in everyday life

Childhood Head Injury Maureen Dennis, Harvey S. Levin, 2016-03-23 Childhood head injuries differ from adult head injuries in some significant respects They occur against a background of ongoing physical and cognitive development Cognitive capacities often change with time post injury But for children changes are affected by two processes of functional plasticity one concerned with recovery one with development The impact of the injury is moderated by age developmental stage In recent years there has been a new focus on the longitudinal comparison of children post injury with appropriate control groups Advances in neuropsychological assessment have permitted evaluation with reference to more developmentally suitable norms expanded definitions of outcome have broadened our understanding of consequences and neuroimaging techniques have enabled the more precise delineation of injury severity the study of structure function outcome relations and the investigation of reorganization of function This special issue offers an overview of cutting edge approaches to the analysis of childhood head injury
