The Solution Revolution William D. Eggers,Paul Macmillan,2013-09-17 Government Alone Can t Solve Society s Biggest Problems World hunger Climate change Crumbling infrastructure It s clear that in today s era of fiscal constraints and political gridlock we can no longer turn to government alone to tackle these and other towering social problems What s required is a new more collaborative and productive economic system The Solution Revolution brings hope revealing just such a burgeoning new economy where players from across the spectrum of business government philanthropy and social enterprise converge to solve big problems and create public value By erasing public private sector boundaries the solution economy is unlocking trillions of dollars in social benefit and commercial value Where tough societal problems persist new problem solvers are crowdfunding ridesharing app developing or impact investing to design innovative new solutions for seemingly intractable problems Providing low cost health care fighting poverty creating renewable energy and preventing obesity are just a few of the tough challenges that also represent tremendous opportunities for those at the vanguard of this movement They create markets for social good and trade solutions instead of dollars to fill the gap between what government can provide and what citizens need So what drives the solution economy Who are these new players and how are their roles changing How can we grow the movement And how can we participate Deloitte s William D Eggers and Paul Macmillan answer these questions and more and they introduce us to the people and organizations driving the revolution from edgy social enterprises growing at a clip of 15 percent a year to megafoundations to Fortune 500 companies delivering social good on the path to profit Recyclebank RelayRides and LivingGoods are just a few of the innovative organizations you ll read about in this book Government cannot handle alone the huge challenges facing our global society and it shouldn t We need a different economic paradigm that can flexibly draw on resources combine efforts and create value while improving the lives of citizens The Solution Revolution shows the way

Commissioner of Patents Annual Report United States. Patent Office,1866 *Flotation Technology* Lawrence K. Wang,Nazih K. Shammass,William A. Selke,Donald B. Aulenbach,2010-06-09 The past 30 years have seen the emergence of a growing desire worldwide that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Since pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long

as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form

Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the last two questions above The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken
