ICT for Smart Water Systems: Measurements and Data Science Andrea Scozzari, Steve Mounce, Dawei Han, Francesco Soldovieri, Dimitri Solomatine, 2020-11-28 Today Information and Communication Technologies ICT have a pervasive presence in almost every aspect of the management of water. There is no question that the collection of big data from sensing and the insights gained by smart analytics can bring massive benefits. This book focuses on new perspectives for the monitoring, assessment and control of water systems based on tools and concepts originating from the ICT sector. It presents a portrait of up to date sensing techniques for water and introduces concepts and implications with the analysis of the acquired data. Particular attention is given to the advancements in developing novel devices and data processing approaches. The chapters guide the reader through multiple disciplinary contexts without aiming to be exhaustive but with the effort to present relevant topics in such a highly multi disciplinary framework. This book will be of interest to advanced students, researchers and stakeholders at various levels.

### **Advances in Modeling and Management of Urban Water Networks**

Alberto Campisano, Enrico Creaco, 2021-01-06 The Special Issue on Advances in Modeling and Management of Urban Water Networks (UWNs) explores four important topics of research in the context of UWNs: asset management, modeling of demand and hydraulics, energy recovery and pipe burst identification and leakage reduction. In the first topic, the multi objective optimization of interventions on the network is presented to find trade off solutions between costs and efficiency. In the second topic, methodologies are presented to simulate and predict demand and to simulate network behavior in emergency scenarios. In the third topic, a methodology is presented for the multi objective optimization of pump as turbine (PAT) installation sites in transmission mains. In the fourth topic, methodologies for pipe burst identification and leakage reduction are presented. As for the urban drainage systems (UDSs), the two explored topics are asset management with a system upgrade to reduce flooding and modeling of flow and water quality with analyses on the transition from surface to pressurized flow, impact of water use reduction on the operation of UDSs and sediment transport in pressurized pipes. The Special Issue also includes one paper dealing with the hydraulic modeling of an urban river with a complex cross section.

*Water Management Challenges in Global Change* B. Ulanicki, Kalanithy Vairavamoorthy, David Butler, Peter L. M. Bounds, Fayyaz Ali Memon, 2020-11-26 *Water Management Challenges in Global Change* contains the proceedings of the 9th Computing and Control for the Water Industry (CCWI2007) and the Sustainable Urban Water Management (SUWM2007) conferences. The rationale behind these conferences is to improve the management of urban water systems through the development of computer-based methods. Issues such as economic globalisation, climate changes and water shortages call for a new approach to water systems management which addresses the relevant technical, social and economic aspects. This collection represents the views of academic and industrial experts from a number of countries who provide technical solutions to current water management problems and present a vision for addressing the global questions. The themes underlying many of the

contributions include energy and material savings water savings and the integration of different aspects of water management The papers are grouped into three themes covering water distribution systems sustainable urban water management and modelling of wastewater treatment plants The water distribution topics cover asset and information management planning monitoring and control hydraulic modelling of steady state and transients water quality and treatment demand and leakage management optimisation design and decision support systems as well as reliability and security of water distribution systems The sustainable urban water management topics include urban drainage systems water reuse social aspects of water management and also selected facets of water resources and irrigation Computer control of wastewater treatment plants has been seen as less advanced than that of clean water systems To address this imbalance this book presents a number of modelling techniques developed specifically for these plants
