Gizmo Warm-up

Ocean swells are an example of **waves**. In the Waves Gizmo, you will observe wave motion on a model of a spring. The hand can move the spring up and down or back and forth.

To begin, check that the **Type of wave** is **Transverse**. **Amplitude** is 20.0 cm, **Frequency** is 0.75 Hz, **Tension** is 3.0 N, and **Density** is 1.0 kg/m. (Note: In this Gizmo, "density" refers to the **linear mass density**, or mass per unit length. It is measured in units of kilograms per meter.)

1. Click **Play** (▶). How would you describe the motion of a **transverse wave**? The wave moves from left to right, but the particles inside move up and down.

Click **Pause** (⏏). Notice the **crests** (high points) and **troughs** (low points) of the wave.

2. Click **Reset** (↺). Choose the **Longitudinal** wave and increase the **Amplitude** to 20.0 cm.

Click **Play**. How would you describe the motion of a **longitudinal wave**?

The wave is moving side to side or left to right.

Click **Pause**. Notice the **compressions** in the wave where the coils of the spring model are close together and the **rarefactions** where the coils are spread apart.

A Beautiful Question Frank Wilczek, 2015-07-14 Does the universe embody beautiful ideas Artists as well as scientists throughout human history have pondered this beautiful question With Nobel laureate Frank Wilczek as your guide embark on a voyage of related discoveries from Plato and Pythagoras up to the present Wilczek's groundbreaking work in quantum physics was inspired by his intuition to look for a deeper order of beauty in nature In fact every major advance in his career came from this intuition to assume that the universe embodies beautiful forms forms whose hallmarks are symmetry harmony balance proportion and economy There are other meanings of beauty but this is the deep logic of the universe and it is no accident that it is also at the heart of what we find aesthetically pleasing and inspiring Wilczek is hardly alone among great scientists in charting his course using beauty as his compass As he reveals in *A Beautiful Question* this has been the heart of scientific pursuit from Pythagoras the ancient Greek who was the first to argue that all things are number to Galileo Newton Maxwell Einstein and into the deep waters of twentieth-century physics Though the ancients weren't right about everything their ardent belief in the music of the spheres has proved true down to the quantum level Indeed Wilczek explores just how intertwined our ideas about beauty and art are with our scientific understanding of the cosmos Wilczek brings us right to the edge of knowledge today where the core insights of even the craziest quantum ideas apply principles we all understand The equations for atoms and light are almost literally the same equations that govern musical instruments and sound the subatomic particles that are responsible for most of our mass are determined by simple geometric symmetries The universe itself suggests Wilczek seems to want to embody beautiful and elegant forms Perhaps this force is the pure elegance of numbers perhaps the work of a higher being or somewhere between Either way we don't depart from the infinite and infinitesimal after all we're profoundly connected to them and we connect them When we find that our sense of beauty is realized in the physical world we are discovering something about the world but also something about ourselves Gorgeously illustrated *A Beautiful Question* is a mind shifting book that braids the age old quest for beauty and the age old quest for truth into a thrilling synthesis It is a dazzling and important work from one of our best thinkers whose humor and infectious sense of wonder animate every page Yes The world is a work of art and its deepest truths are ones we already feel as if they were somehow written in our souls
